Happy New Year!

Gold is up about \$300US/oz since it completed a triple bottom at the beginning of November. It closed Friday at \$1920US/oz and it is looking really positive. Will we see a run to the previous all time highs of \$2070US/oz?

During the same period, the U.S. dollar has been weakening with the U.S. Federal Reserve showing signs of slowing the interest rate hikes.

Gold has been rising but I haven't really seen a lot of juniors following suit. Hopefully there will be some big discoveries and investors will return to the junior space as gold makes a move to new highs.

I think commodities will be a hot topic though out 2023. Copper is already up .50/lb in January. Do you have any lithium juniors in your portfolio?

Good luck in your trading!

VISUALIZING \$65 TRILLION IN HIDDEN DOLLAR DEBT

\$65T in Hidden Debt

By Non-U.S. Banks and Shadow Banks

The era of easy money has contributed to a ballooning \$65T in hidden dollar debt across the global financial system. This debt is in the form of currency swaps, which have grown nearly twofold since 2008.

How it works

- 1 One party borrows a currency (\$) while lending another (€).
- 2 These must be exchanged back at a future date in a swap contract.
- 3 These contracts are considered a form of debt.
- 4 Often, this debt is not recorded on balance sheets due to bank accounting rules.

About Dynacor

- An environmentally and socially responsible industrial gold ore processor
- Committed to shareholder returns through monthly dividend stream and stock buyback program
- An alternative gold company investment with a proven and profitable business model
- Engaged in precious metal sales through the processing of ore purchased from the ASM (artisanal small-scale mining) industry
- Environmentally and socially responsible gold sales through PX IMPACT® gold program
- Fine luxury watchmakers pay premiums for certified clean PX IMPACT® gold
- Decades of experience servicing the ASM industry

NEW AUGUST 2022
13 PAGE PRESENTATION

3 YEAR PERFORMANCE REVIEW

DNG NEWS RELEASES

Dynacor, with 26 years of experience, is a Canadian-based **dividend-paying** industrial gold ore processor. The corporation is engaged in gold production by processing ore purchased from the ASM (artisanal and small-scale mining) industry. Dynacor operates in Peru, where its management and processing teams have decades of experience working with ASM miners. It also owns a gold exploration property (Tumipampa) in the Apurimac department.

Q2-2022 Highlights

Operational

- Higher volume processed. 35,822 tonnes of ore (394 tpd average) compared to 30,374 tonnes in Q2-2021 (334 tpd), a 17.9% increase;
- Higher gold production. Gold equivalent production amounted to 27,875 AuEq ounces compared to 25,172 AuEq ounces in Q2-2021, a 10.7% increase.

Financial

- Solid cash position. \$33.2 million;
- Earnings. \$2.6 million (\$0.07 or C\$0.09 per share);
- Sales. \$53.9 million compared to \$42.8 million in Q2-2021

Cash Return to Shareholders

- Share buy-back. 90,360 common shares repurchased for \$0.2 million (C\$ 0.3 million);
- Increased dividends. Continuation of monthly dividend payments which had been increased by 25% at the start of 2022 to C\$0.10 per share per year which represents a 3.2% dividend yield based on the beginning of 2022 share price.

Peru's largest ASM ore purchaser and processor

Aims to become the world's leading processor of ASM ore

15+ years of experience servicing the ASM industry

Strategic partnership with Swiss based refiner, PX Precinox | PX GROUP

*Strong balance sheet with no debt and US\$25.7 million in cash reserves (as of Q1-2022 report)

CORPORATE SPONSOR

ARGENTINA LITHIUM & ENERGY

Argentina Lithium & Energy believes that the combination of high geologic potential and a promising demand climate have set the conditions for delineating and advancing new lithium resources in Argentina. The Company's management group has a long history of success in the resource sector of Argentina and a strong track record of government and community relations.

Four under-explored projects in the heart of the Lithium Triangle in Argentina.

Brine mapping and drilling planned for 2022.

- ~57,000 hectares of claims on four salars in the Lithium Triangle.
Projects strategically located in pro-mining provinces Salta and Catamarca, near key infrastructure with year-round access.
Aggressive new exploration programs in 2022 and continued evaluation of new prospects.

Projects

Rincon West

- 2,491 ha under option; 460.5 ha 100%-held
Adjacent to Rincon Ltd. and Argosy Minerals lithium projects with proven reserves
Excellent infrastructure including international highway, electric power corridor
First drill program, 5 holes, underway
1st hole results positive: intersected a 70m permeable interval with 225 to 380mg/L Lithium

Pocitos

- +26,000 hectares under option
Excellent infrastructure: International railway to Pacific ports crosses the property; Provincial highway and major gas pipeline nearby
Limited historic exploration

Antofalla North

- 9,080 hectares of 100% held claims + nearly 6,000 hectares under option
Major lithium producer Albemarle has large holdings starting 500m to the south
Geophysical survey identified high-conductivity targets in upper 100 metres, additional targets at depth

Incahuasi

- 100% interest in over 25,000 hectares
Located north of Lake Resources' Kachi Project
Maximum values 409 mg/L lithium and 1.56% potassium recovered in near-surface sampling (to 8m depth)
4 drill-holes confirmed lithium-bearing brines (average to date 109 mg/L Li, 6718 mg/L K)

Exploring the Prolific Lithium Triangle

- Lithium Triangle produces ~1/2 of the world's lithium
Hosts ~60% of known lithium reserves
Most lithium is in salt lake ("salar") brines
Argentina produces ~10% of the world's lithium and is a top-5 global producer (2020)
In close proximity to rail, water, roads and power
Argentine government is encouraging foreign investment and renewable energy initiatives

4 TRUTHS ABOUT STOP-LOSSES THAT NOBODY TELLS YOU

BY: STEVE BURNS
JANUARY 11TH, 2023

NEWTRADERU.COM

Trading professionals frequently employ stop-losses as a risk management method to reduce their losses on a given trade. The trade will automatically be exited when the market price hits the predetermined price threshold.

A stop-loss prevents a minor loss from growing into a larger one and is universally acknowledged as a crucial component of any trading strategy. But some stop-loss realities are rarely discussed, like the lack of a guarantee of a quick exit at the stop-loss price level, the impossibility of stopping significant losses on a gap down in price, the manipulation of other traders triggering your stop-loss, and the psychological toll they can take on the trader during volatile markets. We'll look at these truths in this blog post to help traders handle stop losses more skillfully and with deeper insight.

Four truths about stop-losses

Truth #1: Stop-losses are not guaranteed

Market conditions might cause stop-losses to be triggered, and they don't always execute at the desired price. When the market moves too quickly for the stop-loss to be executed at the targeted price, this is called "slippage." The stop-loss order can be filled at a price other than the one the trader intended. This can cause a bigger loss than anticipated, particularly in volatile markets.

Stop-loss orders might not be carried out in some circumstances, such as when a market gap occurs or a broker overrules the order manually. This might happen when a broker manually closes the deal because they think executing the stop loss order would result in a substantial loss for the trader. This might happen, for instance, when there are erratic market movements, technical difficulties, or trading platform problems. For traders at prop firms, a risk manager may also want a trader out of a position even before the stop-loss is triggered due to risk exposure in volatile markets and to exit before news events like company earnings or economic data.

Truth #2: Big losses are not always avoided by using stop losses

Stop losses are designed to cut down on losses but not completely eliminate them. Placing stop losses too close to the current market price is a mistake that traders frequently make, which can lead to being stopped out too soon. This is especially true in extremely volatile markets where prices can change quickly. In such circumstances, a big temporary market move may cause a trader's stop loss to be activated, and the market prices then reverse back in the trader's favor. This would force the trader to exit a trade that might have turned out well.

Another risk that traders need to be aware of is the "stop loss hunting" behavior. When traders with a lot of capital manipulate the market to set off stop losses and then repurchase the assets at a loss, this happens.

Market makers and institutional traders frequently employ this strategy to exploit retail traders who use stop losses.

Position sizing is the number one way to manage the size of losses even more than stop-losses. The most you can lose is your total position size, but a stop-loss does not guarantee the maximum loss, as gaps, company bankruptcies, and a lack of exit liquidity can make losses bigger than expected. Position sizing is the best risk management tool in the options, futures, and crypto markets.

Truth #3: Other traders can manipulate stop losses

The possibility of stop-loss manipulation by other traders is one of the main concerns of using stop-losses. As noted in Truth #2, traders with significant capital can manipulate the market to cause stop losses and repurchase the assets at a discount, a strategy known as "stop loss hunting."

This danger is particularly common in thin markets with few traders and little liquidity. Even a modest amount of money can alter these markets' prices, setting off stop-losses. Furthermore, there may be greater slippage in thin markets due to a lack of liquidity, which could result in stop losses activating at a price far different from anticipated.

Traders can utilize stop-loss tactics like the "trailing stop loss" to reduce this risk. A specific percentage or dollar amount below the market price is the setting for a trailing stop loss. The stop loss will increase when the market price moves in the trade's favor, giving the trade breathing room while also locking in profit if the market moves against the trade. This can stop traders in risky markets from getting stopped too early. The trailing stop loss strategy enables a trader to exit a winning trade and lock in profits if there's a big reversal on a chart caused by stop running by bigger traders.

Truth #4: Stop losses can be mentally taxing

Although stop losses are an essential part of risk management, they may also be very stressful for traders, especially if they are regularly triggered. This can be particularly difficult for traders who feel they were unfairly stopped out of a trade or who may doubt where they should have placed their stop-loss order.

This can result in “revenge trading,” a phenomenon where a trader makes additional trades to compensate for their losses but loses even more money. Revenge trading is where a trader wants to quickly get back all their losses, usually on the same chart they lost money on. If proper position sizing is abandoned, all the help stop-losses gave the trader to keep their losses small is given back in a few big trades against them.

Risk management strategies like position size are one approach to lessen the psychological cost of stop losses. The process of altering the trade size according to the amount of risk a trader is comfortable with is known as position sizing. By controlling position size, traders can adopt a more sensible degree of risk and lessen the impact of any single trade on the balance of their entire account.

With the right position sizing and stop-loss placement, each trade can be reduced to just one of the next 100 trades to be executed with less emotional impact from short-term results.

A well-defined trading plan that includes stop loss placement, position sizing, and profit targets will help traders stick to the plan and prevent impulsive behavior. This is good risk management and a tactic for keeping the right trading psychology to avoid letting emotions drive decision-making.

Conclusion

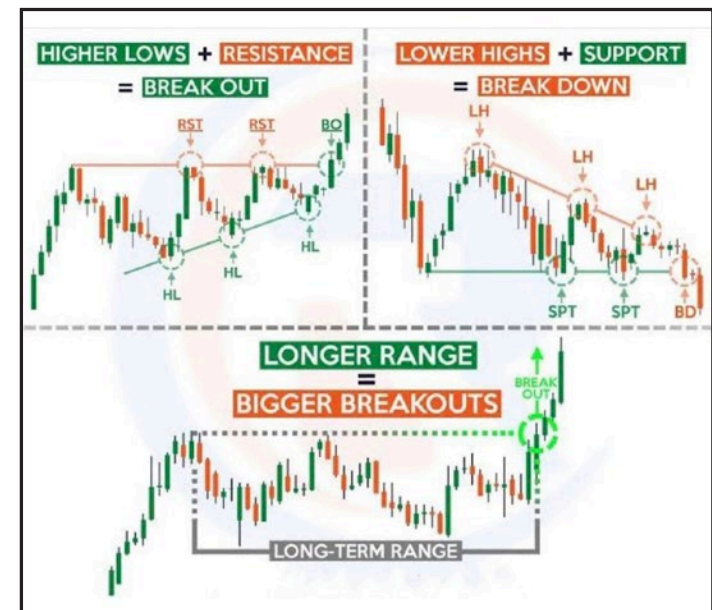

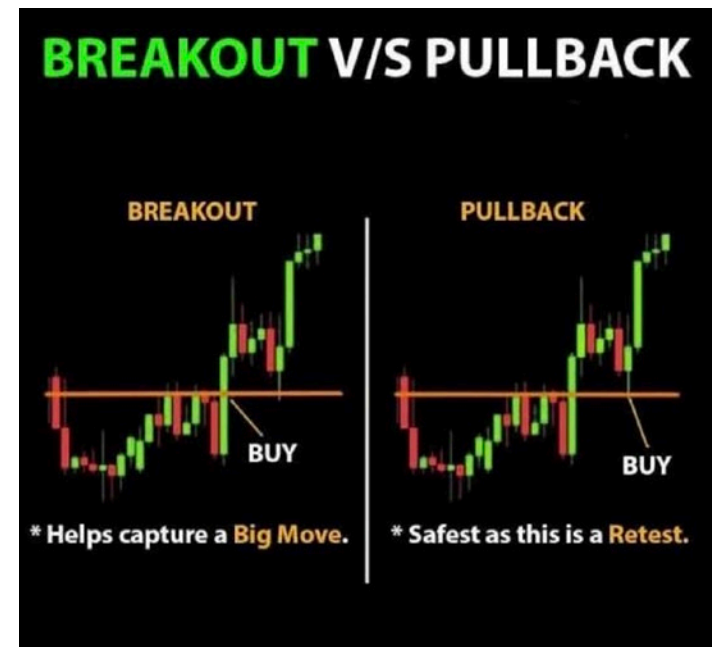

Stop losses are a crucial risk management tool but have certain drawbacks. This post covered several stop loss realities that are not frequently acknowledged in the trading community, such as their lack of certainty, failure to avert significant losses, vulnerability to manipulation by other traders, and psychological toll they may cause.

Traders must remember that stop-losses are a tool for limiting losses rather than a guarantee against them. Stop-losses have limitations and don't eliminate all potential risks. Traders should be aware of them and use them in conjunction with other risk management techniques like position sizing and having a clear trading strategy and edge.

Stop losses are a useful tool for limiting risk in trading, but it's necessary to be aware of their constraints and associated risks. These facts enable traders to employ stop losses more skillfully as a component of a well-rounded trading strategy.

FURY

EDITOR'S
WATCHLIST

WEBINAR WITH CEO
DAVID AUSTIN

LATEST PETER EPSTEIN
REPORT/INTERVIEW

Colonial Coal (CAD TSX-V) dropped .33 per share on December 22 (Closed \$1.05) because Glencore Canada was denied approval for their Sukunka mine. Some panic selling started a free fall. Colonial's news release that day had a simple statement:

"Colonial Coal International Corp. (TSX-V: CAD) (the "Corporation" or "Colonial Coal") confirms that, on the facts as presently known to the Company and the market, the recent decision of the B.C. Environmental Assessment Office respecting an environmental assessment certificate for Glencore Canada's Sukunka mine has no bearing whatsoever on Colonial Coal's current coal projects and their further development."

Stockwatch has Colonial Coal closing at \$1.23 on Friday. The December low was a bounce off the September 23, 2021 low. Have we seen the low? Time for a chart reversal?

This is an asset sale. The stock price obviously doesn't represent the commodity value in the ground. I'm not sure how many small investors will have the patience required to realize the full value. The world needs vast quantities of steel and the Met Coal to produce it.

FURY
GOLD MINES

January 10th Interview
Commodity-TV

Fury Gold Mines (FURY TSX) closed at .73 on Friday. The stock has been trending up recently, breaking out from the .48 area in December to almost hitting 80 last Monday!

On December 21st the company announced [[Read the Full News](#)]:

"The results from the 2022 diamond drilling program confirm that the high-grade core of the Percival mineralization plunges steeply to the west and remains open in all directions. Highlights included an 85 metre (m) step out from historical high-grade mineralization which intercepted **13.5m of 8.05 g/t gold (Au)**, (including 3.00m of 25.8 g/t Au) in drill hole 22KP-008 and a 150m step out which intercepted **7.5m of 4.38 g/t Au**, (including 3m of 8.7 g/t Au, and 3m of 5.5 g/t Au) in drill hole 22KP-005 (Figures 1, 2 and 3)."

On January 11th they put out a 2022 review [[Read the Full News](#)].

"We are extremely pleased with the success we had this past year.
