October 25th:
Announces Positive Results from Third and Fourth Drill Holes at Rincon West

DEPARTURES CAPITAL INTERVIEW

STRATEGIC METALS & RARE EARTHS LETTER

GLOBAL OPPORTUNITIES FOR ARGENTINA'S LITHIUM INDUSTRY

Bottom in?

The Dow Jones average is up about 1500 points since we last wrote. We are on our fourth positive weekly candle. I still don't think further downside to 26,600 is out of the question. Will we get a solid break above 34,000 soon? Recession?

This Wednesday the Bank of Canada is predicted to raise interest rates another .75% to 4%. I would imagine their U.S. counterparts will also raise another .75% on November 2nd. There are rumblings that it may be the pivot point and the U.S. fed might start slowing down the hikes. Time will tell.

My daily EUR/USD chart has printed a daily engulfing divergence signal. There is a chance the high is in for the EUR/USD.

Troubles continue for the UK. [['Beaten by a lettuce': 44 glorious days of Liz Truss](#)]

Have a good week!

J. Michael Oliver entered the financial services industry in 1978 on the futures side, joining E.F. Hutton's International Commodity Division, headquartered in New York City's Battery Park, where he studied under David Johnston, head of Hutton's Commodity Division and Chairman of the COMEX. In 1981, he joined Sprott Money.

ALL THE METALS WE MINED IN 2021

THE WORLD'S TOP 10 LITHIUM MINING COMPANIES

THE CARBON EMISSIONS OF PRODUCING ENERGY TRANSITION METALS: CHARTED

Value and Growth for Investors

PROVEN MANAGEMENT

- Success in discovery, monetizing of assets & capital markets

STRONG FINANCIAL POSITION

- Treasury funded for active exploration
- Substantial equity interest in SSR Mining; leveraged to gold & silver

BUILDING VALUE IN A PROJECT PIPELINE

- New San Pietro 100% held Cu-Au (Co) advanced exploration project adjacent to producing & emerging mines in Chile
- Advanced targets with short-term resource potential plus property-wide upside
- Actively exploring multiple precious metal projects with discovery potential
- +200,000 ha of prospective properties available for JV

Golden Arrow Resources Corporation is a mining exploration company creating value by making precious and base metal discoveries and advancing them into exceptional deposits. Golden Arrow is a member of the Grosso Group, a management company with a track record of discovery in South America.

San Pietro Copper-Gold-Copper Project, Chile

FULL OWNERSHIP:

100% of 18,448 hectares

STRATEGIC LOCATION:

Between Capstone Copper’s Santo Domingo and Mantoverde IOCG mine projects

EXCELLENT INFRASTRUCTURE:

100 km N of Copiapo in mining centre; roads and power lines at property

STRONG OUTLOOK:

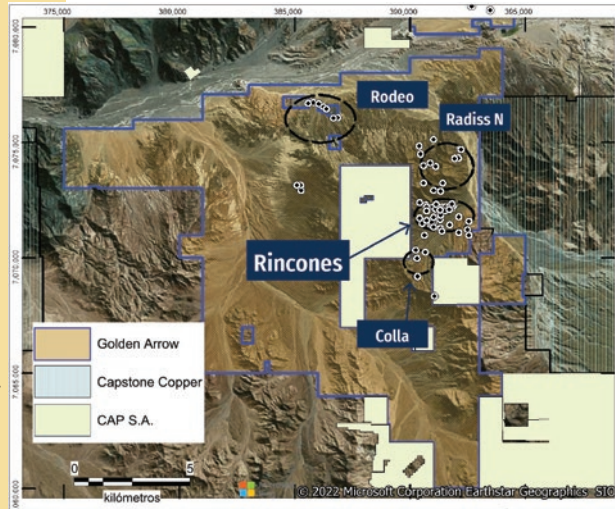

Copper, Gold, Iron and Cobalt all on positive long-term trends

ADVANCED STAGE:

+30,000m of drilling, 4 defined targets, exploration upside

2022 PLAN:

Evaluate full property and refine existing targets for major 2023 drill program

“ WE ACCOMPLISHED THIS ACQUISITION BY TAKING ADVANTAGE OF THE STRONG FINANCIAL POSITION THAT RESULTED FROM OUR LAST SUCCESSFUL TRANSACTION... NOW OUR TECHNICAL TEAM WILL TRY TO DO AS THEY DID WITH OUR CHINCHILLAS PROJECT IN ARGENTINA AND ADVANCE A STRATEGICALLY LOCATED EXPLORATION PROJECT TO PRE-FEASIBILITY. ”

- Joseph Grosso, Golden Arrow Executive Chairman, President and CEO.

About Dynacor

- An environmentally and socially responsible industrial gold ore processor
- Committed to shareholder returns through monthly dividend stream and stock buyback program
- An alternative gold company investment with a proven and profitable business model
- Engaged in precious metal sales through the processing of ore purchased from the ASM (artisanal small-scale mining) industry
- Environmentally and socially responsible gold sales through PX IMPACT® gold program
- Fine luxury watchmakers pay premiums for certified clean PX IMPACT® gold
- Decades of experience servicing the ASM industry

NEW AUGUST 2022
13 PAGE PRESENTATION

3 YEAR PERFORMANCE REVIEW

DNG NEWS RELEASES

Our featured company is a dividend-paying industrial gold ore processor headquartered in Montreal, Canada. The corporation is engaged in gold production through the processing of ore purchased from the ASM (artisanal and small-scale mining) industry. At present, Dynacor operates in Peru, where its management and processing teams have decades of experience working with ASM miners. It also owns a gold exploration property (Tumipampa) in the Apurimac department.

Q1-2022 Highlights

Operational

- Higher volume processed. 36,696 tonnes of ore (408 tpd average) compared to 29,327 tonnes in Q1-2021 (326 tpd), a 25.1% increase;
- Higher gold production. In Q1-2022, gold equivalent production amounted to 27,691 AuEq ounces compared to 21,975 AuEq ounces in Q1-2021, a 26.0% increase.

Financial

- Solid cash position. \$25.7 million;
- Earnings per share. \$5.1 million (\$0.13 or C\$0.16 per share);
- Sales. \$50.1 million.

Cash Return to Shareholders

- Share buy-back. 285,836 common shares repurchased for \$0.7 million (C\$ 0.9 million);
- Increased dividends. A 25% monthly dividend increase is paid since January 2022. On an annual basis, the 2022 dividend will represent CA\$0.10 per share or more than 3% dividend yield based on the beginning of 2022 share price.

Peru's largest ASM ore purchaser and processor

Aims to become the world's leading processor of ASM ore

15+ years of experience servicing the ASM industry

Strategic partnership with Swiss based refiner, PX Precinox | PX GROUP

*Strong balance sheet with no debt and US\$25.7 million in cash reserves (as of Q1-2022 report)

Non-dilutive business model with only 38.6 million shares outstanding (last equity financing in 2010)

LIT

CORPORATE SPONSOR

ARGENTINA LITHIUM & ENERGY

Argentina Lithium & Energy believes that the combination of high geologic potential and a promising demand climate have set the conditions for delineating and advancing new lithium resources in Argentina. The Company's management group has a long history of success in the resource sector of Argentina and a strong track record of government and community relations.

Four under-explored projects in the heart of the Lithium Triangle in Argentina.

Brine mapping and drilling planned for 2022.

• ~57,000 hectares of claims on four salars in the Lithium Triangle.

• Projects strategically located in pro-mining provinces Salta and Catamarca, near key infrastructure with year-round access.

• Aggressive new exploration programs in 2022 and continued evaluation of new prospects.

Projects

Rincon West

- 2,491 ha under option; 460.5 ha 100%-held
- Adjacent to Rincon Ltd. and Argosy Minerals lithium projects with proven reserves
- Excellent infrastructure including international highway, electric power corridor
- First drill program, 5 holes, underway
- 1st hole results positive: intersected a 70m permeable interval with 225 to 380mg/L Lithium

Pocitos

- +26,000 hectares under option
- Excellent infrastructure: International railway to Pacific ports crosses the property; Provincial highway and major gas pipeline nearby
- Limited historic exploration

Antofalla North

- 9,080 hectares of 100% held claims + nearly 6,000 hectares under option
- Major lithium producer Albemarle has large holdings starting 500m to the south
- Geophysical survey identified high-conductivity targets in upper 100 metres, additional targets at depth

Incahuasi

- 100% interest in over 25,000 hectares
- Located north of Lake Resources' Kachi Project
- Maximum values 409 mg/L lithium and 1.56% potassium recovered in near-surface sampling (to 8m depth)
- 4 drill-holes confirmed lithium-bearing brines (average to date 109 mg/L Li, 6718 mg/L K)

Exploring the Prolific Lithium Triangle

- Lithium Triangle produces ~1/2 of the world's lithium
- Hosts ~60% of known lithium reserves
- Most lithium is in salt lake ("salar") brines
- Argentina produces ~10% of the world's lithium and is a top-5 global producer (2020)
- In close proximity to rail, water, roads and power
- Argentine government is encouraging foreign investment and renewable energy initiatives

THE WORST OIL CRISIS IN 40 YEARS HAS STARTED

BY: **STEVE BURNS** NEWTRADERU.COM

OCTOBER 12TH, 2022

Oil supply and demand

Even though the United States is the world's biggest producer of oil it still uses more than it makes requiring imports of oil. The world currently uses approximately 100 million barrels of oil a day, the U.S. produces about 18.8 million barrels a day in 2022 up from 2021. However the U.S. uses 20.5 million barrels a day relying on imports to fill the gap in the demand versus the supply.

Leading oil-producing countries worldwide in 2021

(in 1,000 barrels per day)

Image created by Holly Burns

The U.S. economy remains heavily dependent on importing oil and gasoline to meet the needs of business and commerce. Increased energy costs come directly out of both consumer's discretionary spending budgets and also out of the profit margins of both private and publicly traded companies. This lowers both consumer spending and corporate profits which can bring down the stock market as earnings miss expectations due to lower sales and increasing costs.

Oil trades primarily on futures markets as contracts people buy for delivery in the future or speculate on with trading. The oil market is made up of many players: speculators betting on price (about 3% of volume is speculation), commercial hedgers buying contracts to manage the price risk of future costs, and producers selling contracts to lock in delivery prices.[1]

Over the long-term supply and demand will drive prices up or down depending on which side is most heavily weighted. However, the sentiments of fear and greed can drive short-term price action as emotions cause extreme actions.

The best way to manage oil prices is through the elasticity of oil producers that are able to increase and decrease oil production as needed to meet any fluctuations in demand.[2]

The U.S. is currently at a crossroads with supply needs as

OPEC+ countries are cutting production and the U.S. Strategic Petroleum Reserve has gone from a 90-day supply on hand at the start of the year to less than a 23-day supply on hand remaining for emergencies or to provide price relief for oil and gasoline.

OPEC oil

The countries that produce more oil than they need for their own economies have the most power over oil prices as they are the major exporters of oil onto the world markets. Their national production and supply outstrip their own needs so they have the most influence on pricing power based on how much they produce for exports.

These types of supply side countries can grow very wealthy from their oil sales and it is in their self interest to keep the oil price as high as possible to maximize their own profits.

As one example Saudi Arabia produces over 2 million more barrels a day more than it uses so that can all be exported on the world markets for cash.

OPEC nations produce around 30% of the world's crude oil. Saudi Arabia is the biggest single oil producer within OPEC, producing more than 10 million barrels a day.

How many countries are there in OPEC in 2022?

The organization currently has a total of 13 member countries.

1. **Algeria**
2. **Angola**
3. **Equatorial Guinea**
4. **Gabon**
5. **Iran**
6. **Iraq**
7. **Kuwait**
8. **Libya**
9. **Nigeria**
10. **The Republic of the Congo**
11. **Saudi Arabia**
12. **The United Arab Emirates**
13. **Venezuela. [2]**

In 2016, when oil prices were particularly low, OPEC joined forces with 10 other oil producers to create OPEC+. Those new members included Russia, which also produces over 10 million barrels a day. Together, these nations produce about 40% of all the world's crude. [3]

OPEC+, which includes Russia as well as Saudi Arabia, announced last week it would cut production targets by 2 million barrels a day, which will help keep oil prices high by lowering the supply side. [4]

OPEC+ is a bigger group of 23 oil-exporting countries which meets regularly to decide how much crude oil to sell on the world market.

OPEC+ additional member countries.

1. Azerbaijan
2. Bahrain
3. Brunei
4. Kazakhstan
5. Malaysia
6. Mexico
7. Oman
8. Russia
9. South Sudan
10. Sudan.

Oil crises timeline

Due to the high gas prices in 2022 the Biden administration began to use the U.S. Strategic Petroleum Reserve to increase the amount of oil on the world markets. On March 31, 2022 – to fight higher oil and gasoline prices — President Biden announced the release of one million barrels of crude oil a day for six months from the SPR. [5]

Each ten million barrels released onto the world markets and exported usually creates about 5-6 days of price stability by increasing the supply side.

This did drive down the cost of oil in the gasoline production supply chain to decrease fuel costs. This did work so far in 2022.

Be aware that the SPR is not used to cover the U.S. import deficit it's sold onto the world market to lower the price of oil globally by adding to the oil supply internationally.[6]

The U.S. Strategic Petroleum Reserve is now at a 40-year low after the 6 months of tapping into it to sell.

The Strategic Petroleum Reserve (SPR), the world's largest supply of emergency crude oil was established primarily to reduce the impact of disruptions in supplies of petroleum products and to carry out obligations of the United States under the international energy program. [7]

The SPR's purpose is to be used as a supply during emergencies and this administration decided that the gasoline inflation and the current conflict justified its use.

Oil Piggy Bank

By October, the US Strategic Petroleum Reserve will shrink to a 40-year low as the White House taps it to put a lid on global oil prices

Source: US Department of Energy

Source: Jun-Oct 2022 is forecast based on releases already pre-announced

BloombergOpinion

It was created to give the U.S. instant access to a 90-day supply of oil. Since 1984, the SPR has never had less than 450 million barrels of oil in storage until now.

Oil demand from the world's economies stays very steady and increases as more economies grow and emerge with higher standards of living and wealth creation. The only way currently to lower oil prices is on the supply side as demand doesn't go down unless there is a global lockdown or an economic recession.

OPEC+ is actively cutting production in an attempt to keep oil prices higher and stop them from going lower. If they are successful on the supply side reduction then oil and gasoline prices will remain near their current highs which will keep energy costs at this new price range until enough demand destruction occurs to bring prices down.

Part of this new production cut may have been caused by a drop in sales volume leading to a drop in revenue as the world economy starts to slow. The cut should enable producers to sell less oil for a higher profit margin. The way out would be for demand to increase volume and return producers to their old levels of profits.

Only an economic downturn can reduce the demand side and lower prices which will likely be met with further production cuts in an attempt to optimize oil prices at that new demand level. We may have just entered a new cycle of oil producers cutting production as prices drop, this could be a new trend.

By Steve Burns

CAD

EDITOR'S
WATCHLIST

Since our last newsletter, Colonial Coal (CAD TSX-V) bottomed out at \$1.29 on October 12th. That was the day they had their webinar after the market closed (CAD closed at \$1.34). The webinar seemed to spark some buying because the stock closed up four days in a row reaching a high of \$1.75. It closed yesterday at \$1.59.

If you haven't watched the webinar I suggest you give the replay a view. I found it very informative, especially when he talks about how the bidding process went for Western Coal. Warning, there are a couple F-bombs.

Glossary

Diamond Hands

Slang term for an investor who is ready to hold a position for the end goal, despite the potential risk, headwinds and losses.

Doji Candle

Doji Candles look like a cross because the financial instrument's open and close for the time period are close to equal.

Fibonacci Retracement (Fib)

These are levels in the chart where support and resistance are likely to occur. The levels are 23.6%, 38.2%, 61.8%, and 78.6%. 50% is often added but is not an official level. The levels are calculated from two points chosen by the user, usually an extreme low and an extreme high.

FLEM & DHEM

Fixed Loop Electromagnetic and Down Hole Electromagnetic Surveys

FOMC

The Federal Open Market Committee consists of 12 members and is the U.S. Fed's monetary policy making body. It is responsible for formulation of a policy designed to promote stable prices and economic growth.

FOMO

Fear Of Missing Out

Naked Shorting

It is the illegal practice of shorting stock that is not borrowed.

Nonfarm Payrolls

Is an official statistic released by the U.S. department of labor, usually on the first Friday of the month. It is a measure of the number of workers in the U.S. excluding farm workers and those employed in private households or non-profit organisations.

Shorting

Borrowing stock, selling it in the market to hopefully buy it back at a lower price, making profit from the difference in price, and then returning the borrowed stock.

Short Squeeze

When a company's stock starts to quickly rise because people shorting the stock are trying to cover their losing positions to prevent further loss.

YOLO

You Only Live Once
