SVB FINANCIAL WEEKLY CHART

SVB Financial Group

President Biden @POTUS 2h
Investors in the banks will not be protected.

They knowingly took a risk, and when risks don't pay off, investors lose their money.

That's how capitalism works.

President Biden @POTUS 2h
The management of both these banks will be fired.

If a bank is taken over by the FDIC, the people running that bank shouldn't work there anymore.

132 409 3k

Show this thread

President Biden @POTUS 2h
Everyone who had deposits at those banks can access their money today.

That includes small businesses that need to pay their employees and stay open.

No losses will be borne by the taxpayer.

We'll pay for it from the fees that banks pay into the Deposit Insurance Fund.

Another Bail Out!

Chaos continued in the markets last week with Silicon Valley Bank being halted on news of filing for bankruptcy. As you can see the stock's all time high was \$763.22 and it was halted at \$106.04. The bank held a large amount of government bonds that declined in value as the Federal Reserve continued to raise interest rates. SVB is the largest bank failure since the 2008 financial crisis.

It was a tense weekend as investors waited to see if the bank would be sold, but in the end the Government came through and guaranteed all deposits. Is this a good thing?

History keeps repeating itself. FTX used client funds to make bad investments and down it went. SBV used bank capital for poorly thought out investments and got squeezed.

Who will be next? Can the U.S. Government continue to bail out executives who make bad decisions? What if a dozen banks go under at the same time?

The whole banking sector was being sold over the last few days and gold was up about \$100US/oz. Will this incident force the Federal Reserve to stop raising rates?

Have a Great Week!

About Dynacor

- An environmentally and socially responsible industrial gold ore processor
- Committed to shareholder returns through monthly dividend stream and stock buyback program
- An alternative gold company investment with a proven and profitable business model
- Engaged in precious metal sales through the processing of ore purchased from the ASM (artisanal small-scale mining) industry
- Environmentally and socially responsible gold sales through PX IMPACT® gold program
- Fine luxury watchmakers pay premiums for certified clean PX IMPACT® gold
- Decades of experience servicing the ASM industry

**NEW AUGUST 2022
13 PAGE PRESENTATION****3 YEAR PERFORMANCE REVIEW****DNG NEWS RELEASES**

Dynacor, with 26 years of experience, is a Canadian-based **dividend-paying** industrial gold ore processor. The corporation is engaged in gold production by processing ore purchased from the ASM (artisanal and small-scale mining) industry. Dynacor operates in Peru, where its management and processing teams have decades of experience working with ASM miners. It also owns a gold exploration property (Tumipampa) in the Apurimac department.

Q2-2022 Highlights

Operational

- Higher volume processed. 35,822 tonnes of ore (394 tpd average) compared to 30,374 tonnes in Q2-2021 (334 tpd), a 17.9% increase;
- Higher gold production. Gold equivalent production amounted to 27,875 AuEq ounces compared to 25,172 AuEq ounces in Q2-2021, a 10.7% increase.

Financial

- Solid cash position. \$33.2 million;
- Earnings. \$2.6 million (\$0.07 or C\$0.09 per share);
- Sales. \$53.9 million compared to \$42.8 million in Q2-2021

Cash Return to Shareholders

- Share buy-back. 90,360 common shares repurchased for \$0.2 million (C\$ 0.3 million);
- Increased dividends. Continuation of monthly dividend payments which had been increased by 25% at the start of 2022 to C\$0.10 per share per year which represents a 3.2% dividend yield based on the beginning of 2022 share price.

Peru's largest ASM ore purchaser and processor

Aims to become the world's leading processor of ASM ore

Only Make A Trade If It Passes This 5-Step Test

BY: STEVE BURNS
FEBRUARY 17TH, 2023

NEWTRADERU.COM

Trading the markets can be a profitable way to grow your investment capital, but it can also be risky if not done correctly. One of the keys to successful trading is having a set of criteria to evaluate each potential trade. This article will outline a five-step test that you can use to determine if a trade is worth making.

These steps can increase your chances of making profitable trades and reducing risk.

Step 1: The Trade Setup

The first step in the five-step test is to identify a trade setup. A trade setup is a specific set of circumstances that indicate a potential trading opportunity. To quantify a trade setup, you can look at technical and/or fundamental analysis. Technical analysis involves studying charts and using indicators to identify patterns and trends in the market. Fundamental analysis involves looking at a company's financials, such as revenue, earnings, and cash flow, to evaluate the business's growth potential or macroeconomic data to see where the overall economy is in the current cycle.

Step 2: The Trade Trigger

Once you have identified a trade setup, the next step is to wait for a trade trigger. A trade trigger is a specific event or signal that confirms the trade setup. For example, a trade trigger might be when a stock breaks through a key resistance level if you use technical analysis and trade momentum or trends. A trade trigger might be when a company releases positive earnings results if you use fundamental analysis. A trade trigger happens when you get the signal to take an entry from price, indicators, or patterns on the chart based on your trading plan.

Step 3: The Stop Loss

Before making a trade, you must determine your stop loss level. A stop loss is the price level where you will sell your stock if it drops that low after your entry. The purpose of a stop loss is to limit your losses if the trade doesn't go in your favor as planned. To determine your stop loss level, look at the support levels on the chart and the potential downside risk for the trade. Your stop loss defines your price action risk for the trade, which helps you quantify your position sizing based on how much capital you're willing to lose if stopped out of the trade.

Step 4: The Price Target

In addition to determining your stop loss level, you must set a price target for the trade. A price target is a price at which you plan to sell your stock for a profit. To set a price target, look at the previous resistance levels on the chart and the potential upside for the trade.

Setting a price target helps you to lock in profits and avoid holding onto a stock for too long. Your profit target quantifies your estimated maximum price action profit for a trade at entry and establishes the reward potential.

Step 5: The Reward-To-Risk

The final step in the five-step test is to evaluate the reward-to-risk ratio for the trade. The reward-to-risk ratio is the potential profit of the trade divided by the potential loss. A good reward-to-risk balance is 2:1 or higher, meaning the potential payoff is at least twice the possible loss. By evaluating the reward-to-risk ratio, you can determine if the trade is worth making based on the potential for profit versus loss.

Other Considerations

In addition to the five-step test, there are other factors to consider when making trades. These include market conditions, news events, and company-specific factors that can impact the trade. It's essential to stay up-to-date on market news, earnings announcements, and events that could affect your trades and adjust your strategy accordingly.

Signs You're About To Make A Trading Mistake

1. You're not following a structured approach to evaluate potential trades.
2. You're relying solely on emotions or hunches to make trading decisions.
3. You're not researching the company or market before making a trade.
4. You're not identifying a specific trade setup before making a trade.

5. You're not waiting for a clear trade trigger before making a trade.
6. You're not setting a stop loss level to limit your potential losses.
7. You're setting a stop loss level too close to the entry price, which increases the risk of getting stopped out.
8. You're not setting a price target to lock in profits.
9. You're setting a price target too far from the entry price, which may not be realistic.
10. You're not considering the potential reward-to-risk ratio for the trade.
11. You're not considering other factors impacting the trade, such as market conditions or news events.
12. You're trading on margin without a clear understanding of the risks involved.
13. You're not diversifying your system and putting too much money into one trade.
14. You're chasing hot stocks or trying to chase the market too high.
15. You're ignoring the long-term trend and focusing solely on short-term noise.
16. You're not managing your emotions appropriately and making impulsive trading decisions.
17. You're not using a trading journal to track your trades and evaluate your strategy over time.
18. You're not learning from your mistakes and adjusting your strategy accordingly.
19. You're not seeking advice from a trading mentor when needed.
20. You're not taking the time to evaluate your trading strategy and make necessary adjustments over time.

The Bottom Line

Trading in the stock market can be profitable if done correctly, but it can also be risky if not done with a structured approach with an edge. Following the five-step test outlined in this article can increase your chances of making profitable trades and reduce risk. It's essential to have a set of criteria to evaluate each potential trade rather than relying on emotions or hunches.

When making trades, it's also essential to have a long-term perspective. While individual trades may not always go as planned, having a sound strategy can help you achieve your long-term return goals. It's essential to have patience and discipline when making trades and not to get too caught up in short-term market fluctuations.

If you're looking to make profitable trades in the stock market, it's essential to have a structured approach. By following the five-step test outlined in this article, you can evaluate potential trades and increase your chances of success. Consider other factors that may impact your trades and have a long-term perspective. With a sound trading system, you can achieve your financial goals and build wealth over time.

By Steve Burns

Do not allow **Emotions** to disrupt your **strict execution**.

No matter how you **feel**, if a setup fulfills your **entry criteria** - **Strike!**

Do not find **excuses** to skip trades.

Emotions are not an entry setup!

Pro Trader	Beginner Trader
1. Doesn't over-leverage his account.	1. Use high leverage and typically risks all money in one trade or more than half of it.
2. Accept the losses and doesn't trade based on emotions.	2. Gets angry whenever he takes a loss and risks more to "recover" the loss.
3. Trades only when there is a good opportunity based on his criteria.	3. Opens random trades and hopes it will be a big win.
4. Knows that trading is a business.	4. Have no clue how to treat trading.
5. Has a strategy and always plan his trades.	5. No trading plan, nothing, gets his strategy from reading the stars.
6. Knows when to stop trading.	6. The "stop" is when the balance reaches \$0.

CAD

EDITOR'S WATCHLIST

Colonial Coal (CAD TSX-V) closed down .11 yesterday to close at \$1.54. Since we last wrote the company's shares hit a high of \$1.75 on March 6th. The webinar on February 28th started some buying and some price appreciation. Volume has slowed over the last four days and price has backed off. Hopefully we will see more trading over \$1.75 soon.

Anglo American has properties next to Colonial Coal's Huguenot property. Anglo American PLC has announced that they are raising \$15 Billion U.S. [OFFERING CIRCULAR] Is Anglo one of the companies talking with Colonial? Could some of the financing \$\$ be used for acquisitions? Time will tell, we just need a first bid to get things started.

Coking coal is in demand and countries will need to secure future supply. [RINL RUNNING SHORT ON CRITICAL STEEL MAKING RAW MATERIALS, SEEKS MINISTRY'S HELP]

INVESTOR PRESENTATION

PETER EPSTEIN ARTICLE

FEB. 28TH WEBINAR VIDEO

CAD Chart by TradingView

Benz Mining (BZ TSX-V / BNZ ASX) closed up .005 to .39 on Friday. The company's stock spiked to .64 at the end of January and then has slowly drifted back to the .40ish level.

The company has started its 12,000m drill program in the Upper Eastmain greenstone belt. The company is focusing on exploring for various metals, including gold, lithium, copper, and nickel.

I'm also expecting the mineral resource estimate which is supposed to be out during Q1 2023. There are only a couple more weeks left in the quarter, hopefully there are no more delays.

INVESTOR PRESENTATION

Fury Gold Mines (FURY TSX) closed up .01 to close at .77 yesterday. The stock hit .99 at the end of January and has recently dropped back.

On March 2nd the company announced an increased financing of \$8.75 Million. The financing is a flow-through and is priced at \$1.44 per FT share!

INVESTOR PRESENTATION

Management has no problem raising funds for continuing exploration of their projects.

Tradingview

Tradingview is an excellent online charting platform as well as a social network for traders and investors to exchange ideas.

Glossary

Diamond Hands

Slang term for an investor who is ready to hold a position for the end goal, despite the potential risk, headwinds and losses.

Doji Candle

Doji Candles look like a cross because the financial instrument's open and close for the time period are close to equal.

Fibonacci Retracement (Fib)

These are levels in the chart where support and resistance are likely to occur. The levels are 23.6%, 38.2%, 61.8%, and 78.6%. 50% is often added but is not an official level. The levels are calculated from two points chosen by the user, usually an extreme low and an extreme high.

FLEM & DHEM

Fixed Loop Electromagnetic and Down Hole Electromagnetic Surveys

FOMC

The Federal Open Market Committee consists of 12 members and is the U.S. Fed's monetary policy making body. It is responsible for formulation of a policy designed to promote stable prices and economic growth.

FOMO

Fear Of Missing Out

Naked Shorting

It is the illegal practice of shorting stock that is not borrowed.

Nonfarm Payrolls

Is an official statistic released by the U.S. department of labor, usually on the first Friday of the month. It is a measure of the number of workers in the U.S. excluding farm workers and those employed in private households or non-profit organisations.

Shorting

Borrowing stock, selling it in the market to hopefully buy it back at a lower price, making profit from the difference in price, and then returning the borrowed stock.

Short Squeeze

When a company's stock starts to quickly rise because people shorting the stock are trying to cover their losing positions to prevent further loss.
