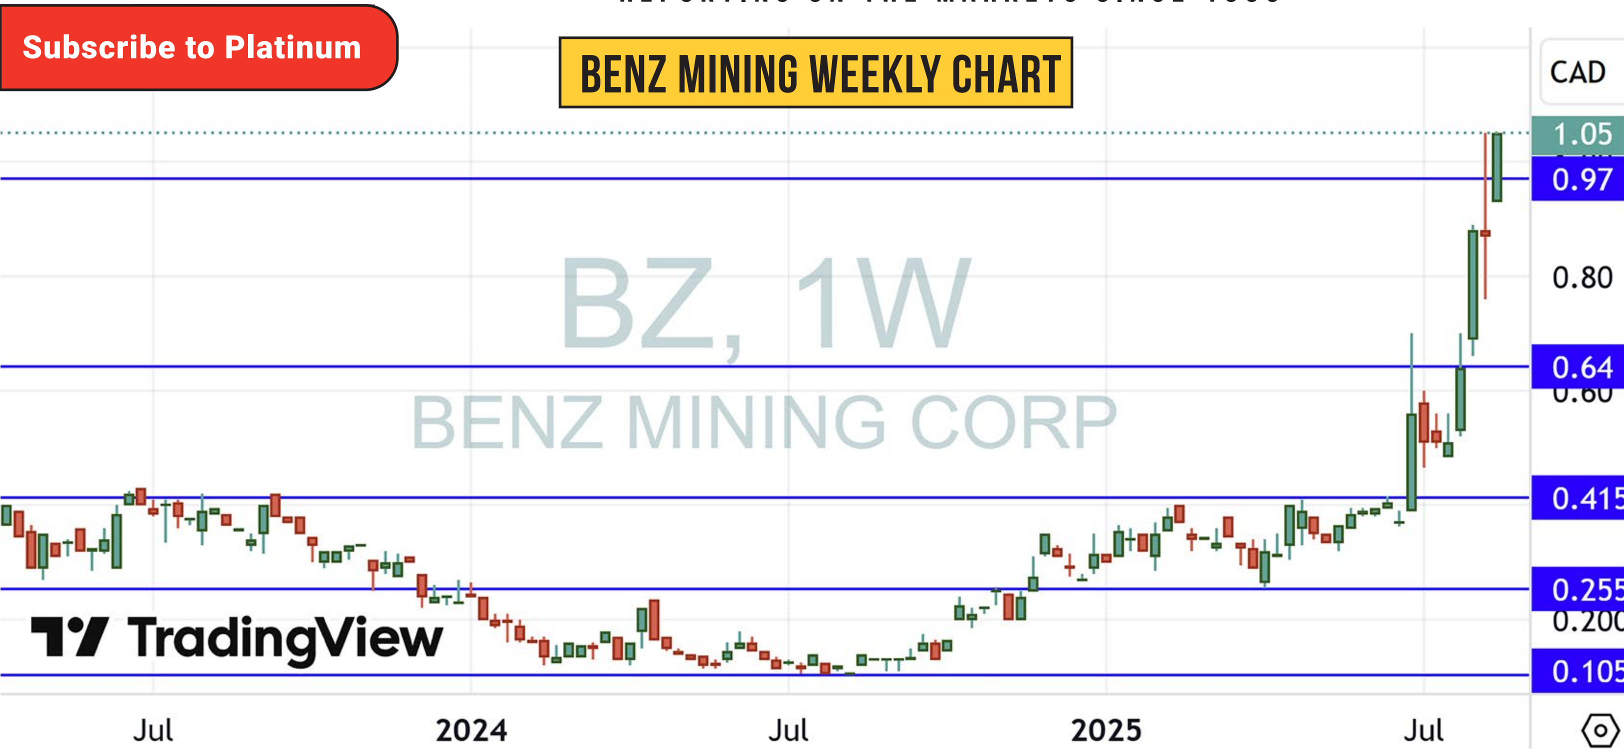
BENZ MINING WEEKLY CHART



August 13th: [King Global identifies high-grade vms mineralization and multiple and untested gravity anomalies at the howard copper project, including 4.6m of 1.8 g/t]

Benz Mining, a new major discovery?

I've been covering Benz Mining for about 4.5 years and still own some that I bought in 2020. The stock peaked in January of 2021 at $1.40 a share. After a multi year slide, it bottomed out at .105 in 2024, and then it began its current rise.

In November of 2024 management found a new project in Australia to focus on, the Glenburgh project they purchased from Spartan Resources Ltd.

The company raised A$13.5 Million at the end of July and recently announced another raising of A$30 Million @ 98.5c Australian.

News 2025-08-12: "With a strengthened pro forma balance sheet of $40-million (Australian) in cash, Benz is well funded to deliver a step change in exploration activities at Glenburgh, doubling drilling capacity to **four rigs** to fast-track resource growth across multiple high-priority targets."

More on Benz in the Editor's Watchlist section below!

Have a great rest of the week!

KING GLOBAL VENTURES

The Key to King Global's Potential

What is a VMS Deposit?

Volcanogenic Massive Sulfide (VMS) deposits represent significant mineral systems that typically contain copper, gold, silver, and other metals. King Global's Silver Cord Project is targeting VMS-style mineralization in the historically productive Black Canyon Mining District.

The project shows key VMS potential indicators as highlighted in the company documents:

- Precambrian Geology present in Black Canyon belt
- Iron & Rhyolite Tuffs providing optimal VMS environment
- Magnetic Signatures confirmed by 2023 UAV survey
- Copper Anomalies identified in soil sampling
- Strategic Location on trend with Kay Mine deposit.

King Global's VMS Advantage

The Black Canyon Project shows all the classic hallmarks of a major VMS district:

- Optimal Geological Setting: Located in the Black Canyon belt with the right Precambrian geology
- Proven Production History: Multiple past-producing mines in the district
- Technical Indicators: Presence of iron formations and rhyolite tuffs—textbook VMS indicators
- Geophysical Signatures: VTEM and 3D-IP surveys reveal disrupted magnetic signatures typical of VMS systems

This compelling geological setting, combined with King Global's methodical exploration approach, positions the company to potentially unlock a major VMS discovery with district-scale potential.

King Global Ventures Inc. (CSE: KING | OTCQB: KGLDF | FSE: 5LM0) is a growth-oriented exploration company focused on the acquisition, exploration and development of precious and base metal properties. Led by an experienced management team with a strong track record of success, King Global is well-positioned to create value for shareholders through its portfolio of prospective projects, including the flagship Black Canyon VMS project located in the renowned mining jurisdiction of Yavapai County, Arizona.

1) Prime Location

America's Copper Heartland

King Global's Black Canyon Project lies at the heart of one of North America's most productive copper terrains. Here's why location matters:

- **Strategic Positioning:** Just 100 kilometers north of Phoenix, Arizona—America's #1 copper-producing state
- **Historical Production:** 15 former producing mines within the property package
- **District Potential:** 60 vein-hosted base and precious metal mines within 150 km radius
- **Infrastructure Advantage:** Excellent accessibility via major highways, plus proximity to power, water, and skilled labor
- **Favorable Jurisdiction:** Arizona ranks among the top mining-friendly jurisdictions globally with established permitting processes

The Black Canyon Project encompasses 213 contiguous mining claims covering 3,800 acres of consolidated VMS terrain. The project sits within the same geological trend as successful VMS deposits, including Arizona Metals' Kay Mine, demonstrating the district's potential for significant copper-gold-silver mineralization.

2) Technical Validation

Modern Science Meets Historical Production

King Global is applying cutting-edge exploration techniques to unlock the full potential of a historically productive district:

- **Comprehensive VTEM Survey:** Completed 660 line KM survey over the entire project area, revealing multiple high-priority targets
- **Advanced 3D-IP Survey:** 2024 survey revealed significant mineralization potential beyond historical workings
- **Geological Confirmation:** Technical work has confirmed key VMS indicators, including:
  - Precambrian Geology present in Black Canyon belt
  - Iron & Rhyolite Tuffs providing optimal VMS environment
  - Magnetic Signatures confirmed by 2023 UAV survey
  - Copper Anomalies identified in soil sampling

The Howard Copper Mine acquisition further strengthens King Global's position, bringing a historically productive asset (100,000 tons at 3-5% copper) into the company's growing portfolio. Recent geophysical surveys indicate extensive exploration potential beyond the historical workings.

3) Clear Path to Development

Methodical Execution

King Global has outlined a clear, staged approach to value creation:

- **Current Program:** USD $1.4 million drill program completed Howard Copper Mine
- **Near-Term Catalysts:** Planning 2,500-meter diamond drilling campaign Silver Cord
- **Strategic Expansion:** Option to earn 65% interest through structured investment
- **Disciplined Approach:** Exploration dollars focused directly on advancing the Howard Copper Mine, Silver Cord and Iron Horse Project

This methodical approach ensures efficient capital allocation and a steady stream of news flow as the company progresses through its development milestones.

The Changing Political Landscape for Copper

As copper transitions from merely an industrial metal to a strategic asset, government policy is increas-ingly supportive of domestic production:

- **Strategic Designation:** Copper is being repositioned as a strategic resource critical to energy security and national defense
- **Permitting Acceleration:** Executive orders have been signed to fast-track the development of critical minerals, with copper featured prominently
- **Financial Incentives:** New policy frameworks providing tax credits and funding support for domestic copper exploration and production
- **Trade Protection:** Potential implementation of tariffs on copper imports to boost domestic production

KING

CORPORATE SPONSOR

KING GLOBAL VENTURES

Current Activities

- Recently finished a USD $1.4 million drilling program at Howard Copper Mine
- Planning a 2,500-meter diamond drilling campaign, Silver Cord Mine
- Completed comprehensive 660 line KM VTEM Survey over entire project
- Conducted 3D-IP survey in 2024 revealing significant mineralization potential
- Finished adding 1000 acres to land package based on VTEM results

Strategic Approach

- Option to earn 65% interest through structured investment
- Mapping each of the 15 former mines with precision
- Running advanced geochemical & geophysical surveys across the property
- Securing permits needed for targeted drilling via comprehensive environmental impact assessment
- Preparing for modern drill programs

11 Page Presentation

KING News Releases

This dramatic shift in copper's political importance creates an unprecedented opportunity for companies with U.S.-based copper assets—exactly where King Global is strategically positioned.

4) Strong Financial Position
Ready to Execute

King Global combines a strong balance sheet with a shareholder-friendly capital structure:

- **Solid Cash Position:** $5.3 million capital raise recently completed
- **Near-Term Catalysts:** Market capitalization of $20 Million
- **Growth Potential:** Currently trading at $0.50-0.60 per share
- **Insider Alignment:** Management controls over 60% of shares
- **Long-Term Commitment:** No insider sales since company inception

This financial positioning gives King Global the runway to execute its exploration strategy without near-term dilution, allowing shareholders to capture the full upside potential of exploration success.

5) Experienced Leadership
A Team That Delivers

King Global is led by a seasoned team with a track record of success across capital markets and resource development:

- Robert Dzisiak - CEO: Extensive capital markets experience with a proven track record of growing organizations and managing IIROC member firms
- Ben Hudye - Chairman: Significant business development success including founding Zenith Bank & Trust
- Technical Advisory Team: Ensures strategic project development with deep geological expertise
- Legacy of Excellence: Building on the wisdom of veteran prospectors like Steve Karolyi, whose methodical approach to exploration informs King Global's strategy today

This combination of capital markets expertise and technical knowledge provides King Global with the leadership necessary to advance its projects effectively while creating shareholder value.

The Timing Opportunity

Several near-term catalysts make now the ideal time to consider King Global Ventures:

Exploration Results Pending
Results from the current 2500 metre drilling program at the historic Howard Copper Mine expected late May 2025

Drilling Campaign Launch
Upcoming 2,500-meter diamond drilling program, Silver Cord Project

Magnetic Surveys
Howard Copper Mine and Iron Horse Project

Expanding Asset Base
Ongoing evaluation of additional strategic acquisitions

Market Awareness Growing
Increasing investor focus on U.S.-based copper projects

As King Global advances through each phase of exploration, the company is building something substantial—a thoroughly explored, well-understood Silver-Gold-Copper projects in one of North America's most productive mining regions.

A SIMPLE YET POWERFUL TECHNIQUE FOR IDENTIFYING TRENDS

Learn how to tune out day-to-day noise and conflicting opinions, and see what this technique reveals about precious metals and mining stocks right now.

BY: JESSE COLOMBO
AUGUST 13, 2025
THEBUBBLEBUBBLE.SUBSTACK.COM

In addition to precious metals market updates and reports, I regularly share valuable tips and tricks that I find extremely helpful in my own market analyses and in the ones I share in this newsletter. I do this to ensure that all of my readers are on the same page and have the literacy needed to understand my analyses.

In today's lesson, I am going to teach a simple yet powerful technique for identifying trends and looking past day-to-day noise and volatility in assets and markets, including but not limited to precious metals.

I was motivated to write this guide by the recent choppy behavior in precious metals caused by speculation about potential tariffs on U.S. gold imports. While this has created confusion, I have been consistent in telling everyone not to worry about the noise and to focus on the big-picture trend, which is highly bullish. So let's dive in.

The tool I am teaching about today is the 200-day simple moving average (or 200-day MA for short). It is widely followed for identifying support and resistance levels, which is indeed useful. However, the unique way I use it is far less common and is even more valuable and powerful, in my opinion.

As a refresher for those unfamiliar, the 200-day simple moving average is calculated by averaging the last 200 days of closing prices of an asset. Each time a new data point is added, the oldest one is removed from the calculation, keeping the average focused on the most recent 200 days. This creates a rolling effect, allowing the moving average to track an asset's price over time with a lag. It is useful for smoothing out noise and day-to-day volatility, making it easier to isolate the underlying trend.

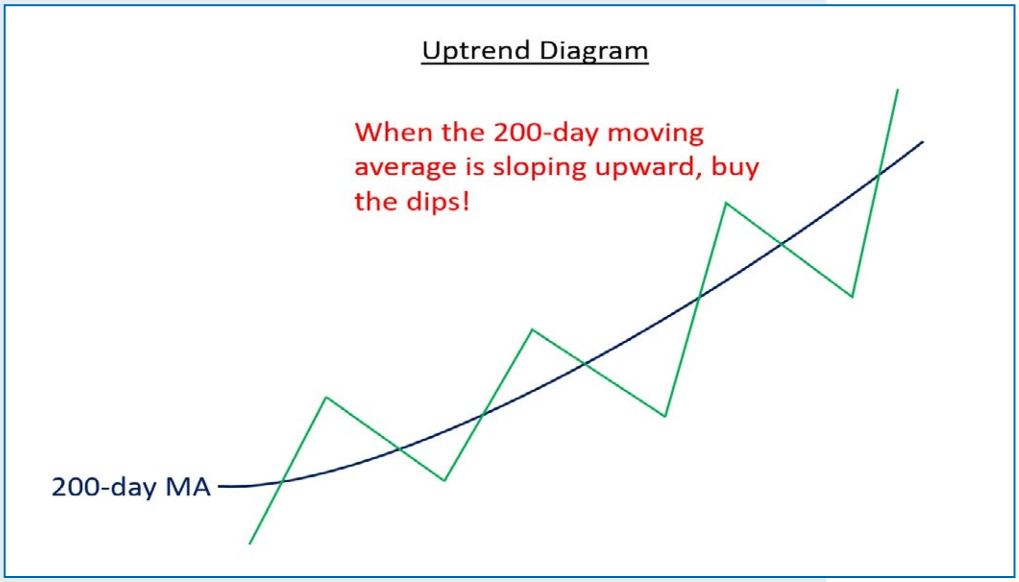
The way I use the 200-day MA is by identifying its slope to determine whether the underlying trend is up, down, or sideways. In that sense, it is similar to the concept of a first derivative in calculus.

I consider myself a trend-following trader, and many of the greatest traders and investors of all time share that approach (learn more). Our mantras are "trade with the trend, not against it" and "the trend is your friend." A trending asset is like a supertanker that needs two miles to turn around due to its strong momentum. There is a much greater chance of it continuing in the direction of the trend rather than reversing, so it is best to go with the grain instead of against it.

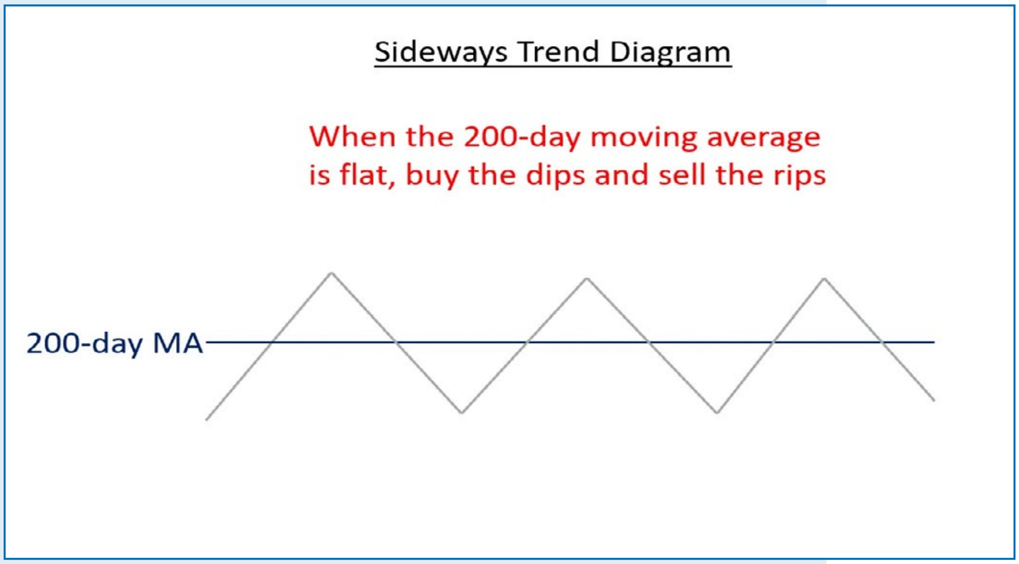
A trending asset is like a supertanker that takes miles to turn around. Wikipedia.

Next, let's look at a series of diagrams that illustrate how I use the 200-day MA to determine an asset's trend and establish my trading bias.

In the first diagram, we see an asset with a 200-day MA sloping upward, indicating a confirmed uptrend. In this scenario, I want to take only a bullish approach and avoid focusing on negativity, even when there are occasional down days. In a confirmed uptrend, this is when you want to "buy the dips," as there is a high likelihood the asset will rebound and continue in the direction of the primary trend, which is up. Contrary to popular belief, buying the dips is not always a good strategy in all market conditions, as I will soon show—but it is effective when the trend is up.

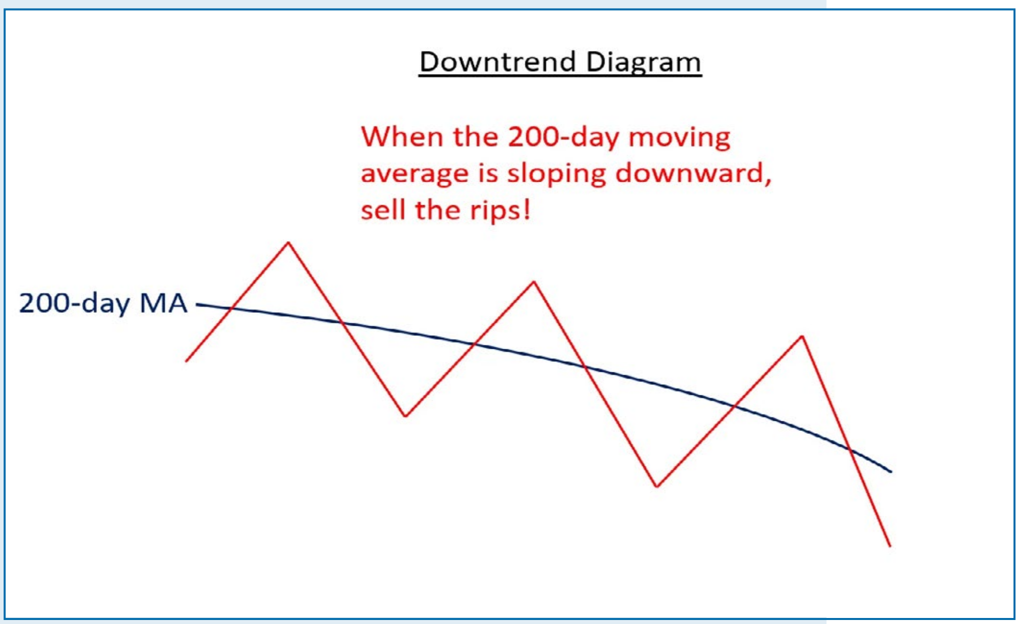


The next diagram shows a sideways trend, indicated by a 200-day MA with little to no slope. This occurs when an upward- or downward-sloping 200-day MA flattens out, signaling a notable change in trend that is worth paying attention to.



During a sideways trend, both rallies and selloffs tend to revert back toward the mean, making it most effective to "buy the dips and sell the rips." However, this approach is better suited for experienced traders who are skilled at cutting losses quickly, since sideways trends eventually transition into either uptrends or downtrends.

The final diagram shows a confirmed downtrend, indicated by a downward-sloping 200-day MA. This scenario is the inverse of the confirmed uptrend shown in the first diagram. In this condition, it makes sense to focus on the bearish case and disregard positive news and rallies, making it the time to "sell the rips."



While many amateur traders believe it is always a good time to "buy the dips," that approach is a terrible idea during a confirmed downtrend. It is one of the main reasons they lose money, as they are essentially trying to catch a falling knife. A better approach for those looking to buy is to wait until the moving average flattens out and then slopes upward again, putting the odds back in the bulls' favor.

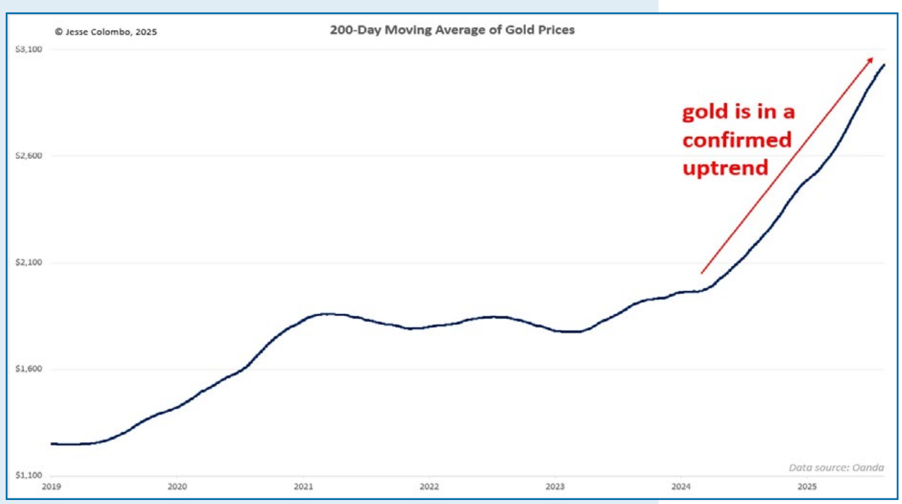
Next, I want to show a real-life example of the value of using the 200-day MA to cut out noise and focus on the big-picture trend. The chart below shows silver over the past 16 months, a period that has been extremely choppy, confusing, and frustrating. Yet, the 200-day MA has consistently indicated that silver has been in a confirmed uptrend—and it still is.

Because of that, I have remained [consistently bullish]() on silver while tuning out the negativity, and I still am. Along the way, I have taken plenty of criticism and even lost some short-sighted and impatient paid subscribers. Yet, despite that, silver is now at 14-year highs, and I am profiting nicely from it. I believe this bull market is only just getting started ([learn more]()).

The next chart shows gold over the past four months, which has been trading sideways in a healthy summer consolidation pattern while digesting its large gains from the fall and spring. While many inexperienced investors and traders are growing impatient with gold, my focus remains on the upward-sloping 200-day MA, which indicates that gold is still in a confirmed uptrend. This means the odds favor another bullish move once this consolidation period ends and Wall Street comes back from vacation mode. (Plus, the long-term fundamentals are [undeniably bullish]() and a breakout from this trading range gives a price target of [roughly $4,400]().)

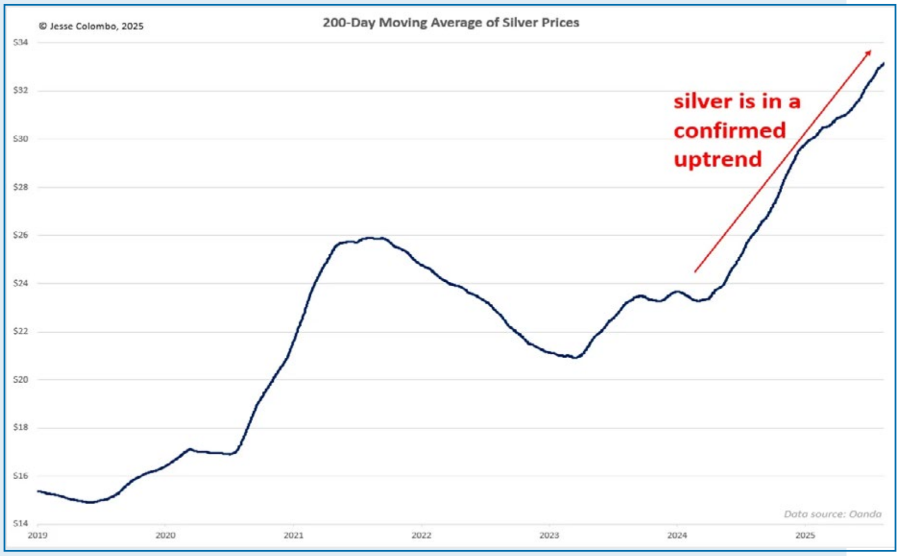
As I have been saying, in a confirmed uptrend my approach is to tune out all negativity, whether it is related to tariffs, politics, geopolitics, inflation, economic reports, or even other popular analysts trying to call the top in gold. Many have attempted to do so throughout this bull market, and they have been flat-out wrong.

In the last two charts, I showed the 200-day MA plotted over the price charts of gold and silver. However, I sometimes like to plot the 200-day MA on its own to isolate it and focus more clearly on what it is indicating. This approach helps me worry less about day-to-day noise and concentrate instead on the direction the "supertanker" is headed, so to speak.



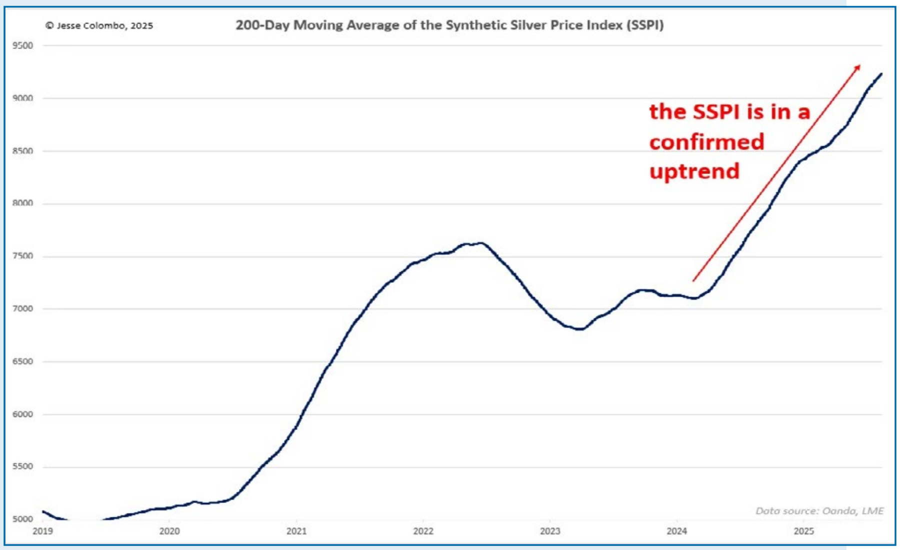
The chart below shows the 200-day MA of gold, which is sloping strongly upward. This indicates that gold is in a confirmed uptrend, so that is my bias, and I do not care about anything else. It is a simple heuristic, but it is highly effective.

The next chart shows the 200-day MA of silver, which is also sloping strongly upward. This is a clear signal to ignore the naysayers and day-to-day setbacks and focus on the bullish case. When I see this, my mindset is that the future is bright for silver, and I do not want my analyses biased or clouded by pessimists.



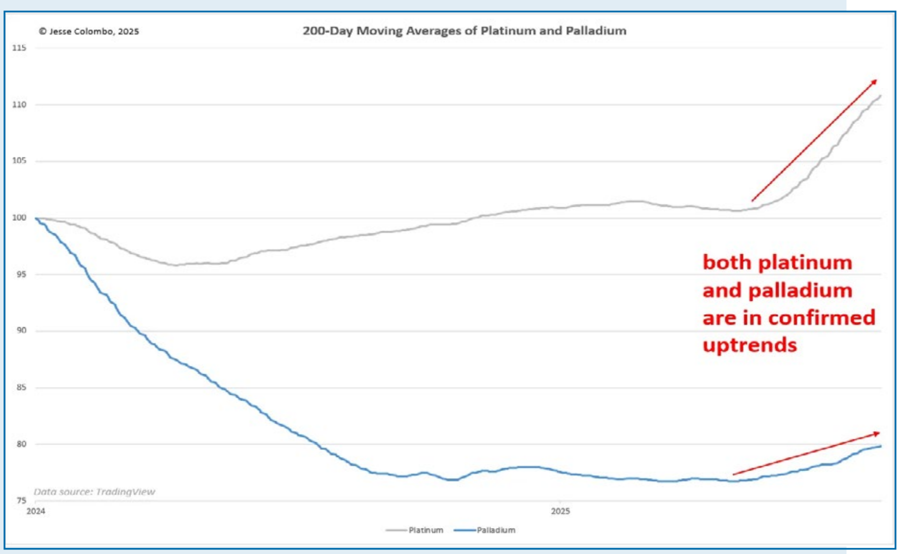
Lately, I have even received a few nasty emails from people upset that silver is down a mere $1.50 from its recent highs—never mind that it has risen significantly over the past two years and that [I called the start](#) of the bull market in early 2024.

I have also plotted the 200-day MA of the Synthetic Silver Price Index (SSPI), a proprietary indicator I use to confirm whether silver's price moves are legitimate (learn more). This too is in a strong, confirmed uptrend, which bodes very well for silver.

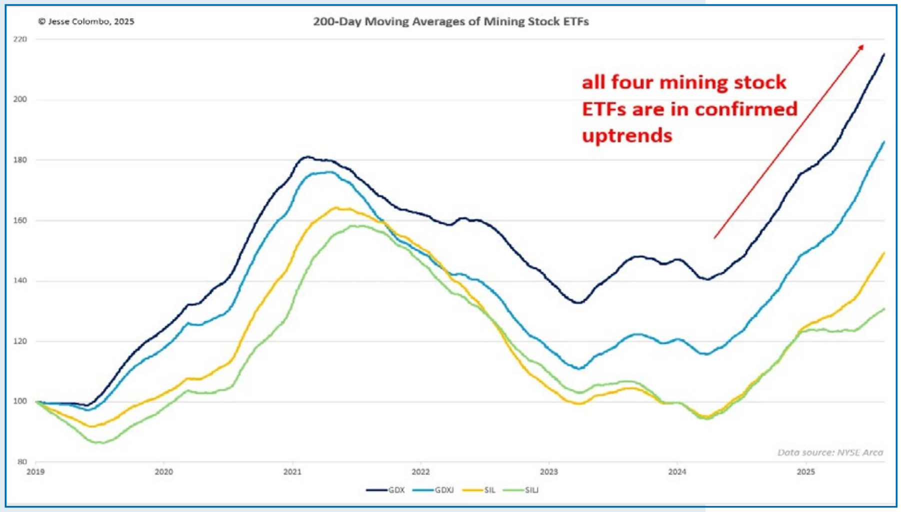


(Note: Because of recent distortions in COMEX gold and copper futures caused by the Trump administration's tariffs, I used a modified SSPI formula that incorporates the global spot price of gold and London Metal Exchange copper futures. The message remains exactly the same as the original. I will be writing an article on this soon.)

Although the bull markets in gold and silver have received the most attention over the past two years, platinum and palladium have begun to wake up in recent months. This is clearly reflected in the upward-sloping 200-day MAs of both metals. This development is also a positive sign that the overall precious metals bull market is becoming more broad-based and remains in its early stages. I recently published a report on my outlook for platinum and will be releasing one on palladium very soon.

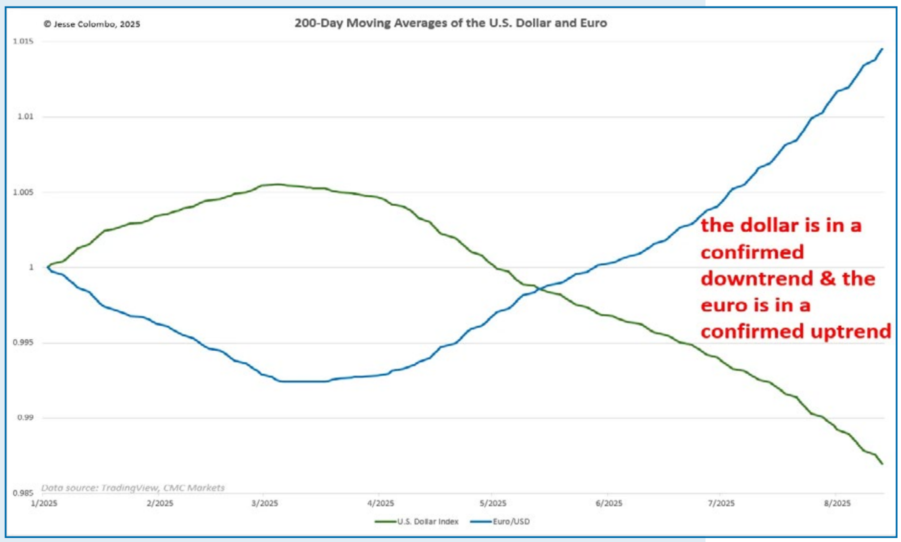


Not only are precious metals themselves in strong, confirmed uptrends, but so are gold and silver mining stocks. This can be seen in the chart below showing the 200-day MAs of the popular ETFs: VanEck Gold Miners ETF (GDX), VanEck Junior Gold Miners ETF (GDXJ), Global X Silver Miners ETF (SIL), and Amplify Junior Silver Miners ETF (SILJ).



It is worth noting that the gold mining ETFs have more strongly sloping 200-day MAs than the silver mining ETFs. This indicates that silver miners are lagging behind gold miners, which is typical in precious metals bull markets. However, I believe silver miners are about to catch up in a big way soon. I am very bullish on gold mining stocks, as I explained in [a recent report](), and I will be publishing a report on silver mining stocks soon.

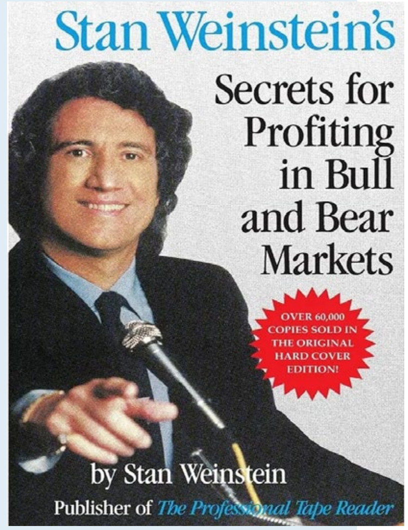
Using the 200-day MA to identify trends is useful for all assets, including currencies, which I also monitor closely because they strongly influence the direction of precious metals. The U.S. dollar, in particular, has an inverse correlation with precious metals, while the euro tends to have a positive correlation.



As [I have explained]() in recent months, the dollar is in a confirmed downtrend and the euro is in a confirmed uptrend. You can see this in the chart below, and together these trends create a bullish tailwind for precious metals.

To confirm my point above, notice how closely gold and the euro move together—they are practically in lockstep. Since the euro is in a confirmed uptrend, and assuming that trend continues, it should help push gold even higher. On that note, read my recent update on why Morgan Stanley expects the euro to continue strengthening, which I explained would be a boon for the price of gold.

If you enjoyed today's lesson on identifying and trading with the trend, I highly recommend one of my all-time favorite trading books—the 1988 classic *Secrets for Profiting in Bull and Bear Markets* by Stan Weinstein, available on [Amazon](). Stan makes extensive use of long-term moving averages similar to what I demonstrated in this lesson, along with his highly useful "Stage Analysis" approach. Although he uses the 150-day moving average instead of my preferred 200-day moving average, I have found little difference in real-world application after comparing the two.



If you are a mining stock investor in particular, this book is essential reading. It shows you how to recognize when the trend is changing so you know when to sell, which is critical for volatile mining stocks, which in my view are not buy-and-hold-forever investments, unlike gold and silver bullion.

To summarize, one of the most powerful principles in trading and investing is to trade with the trend, not against it. Doing so will dramatically increase your odds of success, keeping you in winning trades that continue higher while helping you exit—or avoid entirely—investments that turn into underperformers despite appearing "cheap" or like screaming buys, only to sink even lower.

By using the 200-day moving average, you can remove the guesswork from determining an asset's trend and ignore day-to-day noise as well as conflicting opinions from the peanut gallery. On a tactical level, gold, silver, and their mining stocks are in undeniable, confirmed uptrends, and that is my sole focus right now while I tune out the naysayers.

I hope you found this lesson valuable and that it helps you in your trading and investing, as well as in better understanding the insights I share in this newsletter. If you enjoy trading lessons like this one, I also recommend checking out my two-part series (part 1, part 2) on how to identify and use support and resistance zones—another simple yet powerful technique that I rely on heavily in both my own trading and in the analyses I share in *The Bubble Bubble Report*.

If you've enjoyed this report or have any questions, comments, or thoughts, please give this post a like and share your thoughts in the comments below—I'd love to start a conversation and hear your perspective.

Strategic Edge
Why Helium, Why Now?

Helium Powers the Technologies of Tomorrow

- **AI & Data Infrastructure**

Helium cools high-performance data centers and is essential to chip fabrication (e.g., Nvidia H100, Blackwell series). As AI scales, helium demand follows.

- **Clean Energy & Decarbonisation**

Helium enables cryogenic liquefaction in hydrogen production and fuels next-gen Small Modular Reactors (SMRs) — vital for grid stability in an AI-driven world.

- **Medical & Healthcare Innovations**

Helium supports breakthrough cancer therapies, MRI systems, and cutting-edge cold plasma treatments for chronic wounds and antimicrobial resistance.

Why Pulsar is Poised to Lead

- **Scarce & Strategic**:

There is no substitute for helium. Demand is growing while global supply remains constrained.

- **Regulatory Progress**:

Pulsar helped pioneer the legal framework for helium extraction in Minnesota.

- **Fast Track to Production**:

Two successful wells drilled. Testing imminent. Infrastructure roadmap in place.

8/18/2025 Major Flow Test Results at Jetstream #1, Topaz Project

PULSAR HELIUM INC™

PLSR: TSXV
PLSR: AIM
PSRHF: OTCQB

EXPLORATION & PRODUCTION OF PRIMARY HELIUM IN STABLE JURISDICTIONS

Pulsar Helium Inc. is an emerging multi-project primary helium exploration and development company with first mover advantage in two new helium provinces: Minnesota, USA and Greenland. A recently drilled well on its flagship USA based Topaz Project flowed a helium concentration of up to 14.5%, the highest drilled concentration in North America. To put this into perspective, there are occurrences with c.0.3% helium content, which are considered economically viable.

Strategic Highlights

- First-Mover Advantage in two high-potential helium districts (USA & Greenland).
- Topaz Project (Minnesota) now one of North America's most promising new helium discoveries.
- Agreement with Chart Industries to fast-track processing plant development.
- Legislative Tailwinds: The state of Minnesota passed new helium legislation in May 2024, paving the way for exploration/production and leasing state lands.
- CO_2 potential: A potential byproduct and value-add, utilizing carbon capture technology

Project Spotlight: Topaz (Minnesota, Usa)

Drilling Milestones (2025)
- Jetstream #1: TD 5,100 ft; helium concentration up to 14.5%
- Jetstream #2: TD 5,638 ft; helium up to 3.5% (diluted); confirms extended reservoir.

Upcoming Testing:
- Clean-up Operations Underway August 2025.
- Flow and Pressure and Sample Testing: August 2025 - critical for final reservoir confirmation
and true helium grades (uncontaminated).
- Production Infrastructure: 12 - 18 months for procurement, fabrication, and commissioning via Chart Industries.

Management Ownership:

~37% of issued share capital held by insiders - aligned with investor success

Project Spotlight: Tunu (Greenland)

- Helium Presence Confirmed: Gas concentrations with up to 0.8% He observed at surface.
- Seismic Survey Results: Two anomaly zones suggest favorable subsurface structure and fractured rock - ideal for gas accumulation.
- Geothermal Potential: Newly identified subsurface anomalies also indicate geothermal energy opportunity.
- Sproule-ERCE scoping study underway - anticipated completion late August 2025.
- Strategic Optionality: Seeking partners to advance Tunu while Topaz moves toward production.

The Bigger Picture

"**Helium is at the center of three converging megatrends: AI, energy resilience, and decarbonisation.**"-**#PLSRINSIGHTS, July 2025**

From powering quantum computers to enabling hydrogen liquefaction, there's no modern infrastructure without helium. Pulsar Helium is on the frontlines, with strategic land positions, rare high-grade discoveries, and a clear route to production.

*Metal and cryptocurrency data as of 4:00pm ET yesterday.

In Today's Briefing

Gold

Last week marked some rather extreme volatility in the gold market after reports of an unexpected US tariff on bullion bars blindsided the market. While standard spot price charts fail to capture the assault on $3500-plus, the following one-month (5-hour) chart courtesy of Investing.com does...

Uncertainty over which units would be impacted—1-kilogram, 100-ounce gold bars, etc—kept the market in a heightened state of suspense until Trump weighed in earlier this week on social media, exclaiming, "Gold will not be Tariffed!"

Imagine the life of a big money trader in this schizophrenic, Helter Skelter T2 environment - “Every F**kin’ Day Bro” - A Glimpse Into The Life Of A Hedge Fund Manager Under Trump 2.0.

For those who may not be in the seat, or have a clue as to just what the daily roller-coaster has been like for the last seven months and counting, Harris Kupperman, CIO of Praetorian Capital posted the following on X, which although a little tongue in cheek, is awfully close to the reality of anyone trying to trade this chaos. Brace yourself, as Kuppy says “Every fuckin’ day bro… every one!”

An excerpt from the above link—a peek into this hedge fund manager’s trading day (the digits represent the hour in the a.m.)...

- 8:00 - An LP calls to remind me of some ShitCoin he recommended that’s now up 1800% since he recommended it.
- 8:09 - 10-yr bonds gap down 17 bps, but all I can find is a tweet from Bessent about how great Main Street is doing.
- 8:15 - Some sell side asshole cold-calls me to see if I want a copy of his upgrade report on the AI sector. Tells me that “it’s going to be big and you don’t want to miss it.”
- 8:20 - Check my email, do 10 minutes of actual work.
- 8:30 - Trump threatens Brazil, I realize our BZ exposure is gonna get thumped on the open. (Crack open a 2nd beer)
- 8:33 - Reminisce about how productive I was, since Biden wouldn’t even wake up until noon.
- 8:40 - Chat with my CFO for 19 mins about some new compliance form we need to file.
- 8:59 - Trump Tweets about how stupid Powell is. Futures are back down 30 handles.
- 9:04 - Join a call 4 mins late with an endowment that wants an update, but 100% will never invest. “BTW - we need you to update the DDQ as we’ve changed our format”
- 9:29 - Casino is opening. Let’s see what happens.

More recently, the Bureau of Labor Statistics released its latest read on inflation via its July Consumer Price Index report—a report that presented mixed signals on current price pressure. According to Gary and Joseph Wagner over at kitco: *While the year-over-year headline inflation figure came in below economists’ consensus forecasts, core inflation registered 3.1%, exceeding expectations and highlighting persistent underlying price pressures.*

Where interest rate expectations are concerned, in the wake of these mixed CPI digits and a weak jobs report for the month of July, the probability of a Fed rate cut on September 17th is now 94.2%. Source: The FedWatch Tool.

A panicky Treasury Secretary? Scott Bessent is sounding the alarm, pushing the Fed to slash rates by 50bps in September - Fed Rate Cut Call by Bessent Targets 50bps Reduction in September.

[Some analysts believe](#) these latest CPI digits substantially understate the pressure underpinning consumer prices. Some analysts believe that even at face value, they evidence a need for higher, not lower interest rates.

Precious Metals Equities

Picking up where we left off in last week's Briefing, gold stocks continue to outperform the metal.

Though the mainstream media may be completely oblivious to the rally that's currently underway, those with meaningful exposure to the senior producing entities are grinning all the way to the bank.

Last week, we noted: though the GDXJ, the VanEck Junior Gold Miners ETF, isn't quite there yet, a breakout to new bull market highs appears inevitable.

While the move isn't exactly a moonshot (YET), we now have our breakout in the GDXJ...

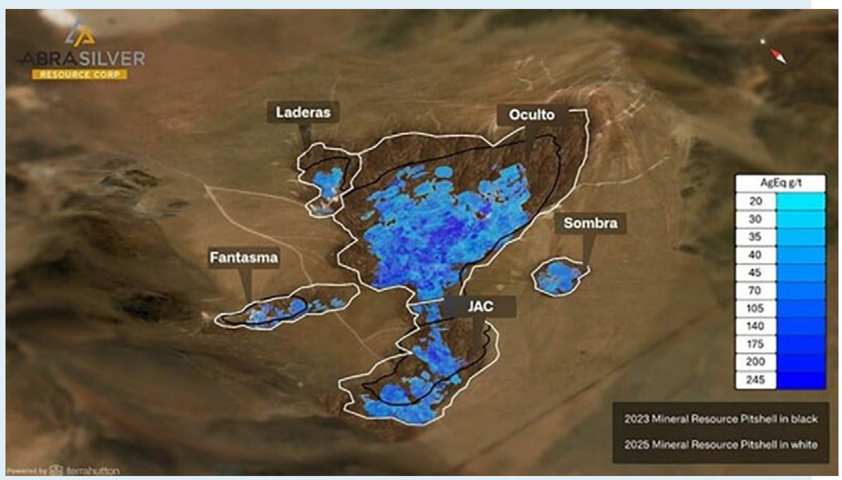
The bull market action can be observed further down the food chain as sentiment turns increasingly positive and funds are mobilized from the sidelines.

A couple of random examples of market movers, one an explorer/developer, the other a producer/developer, with the word silver in their names:

[AbraSilver Resource Corp](#) (TSX:ABRA), followed closely in these pages, has taken out yet another all-time high.

Two weeks back, Abra dropped a resource update for its [Diablillos Ag-Au Project](#) in Salta Province, Argentina via the following headline - [AbraSilver Substantially Increases Total Diablillos Mineral Resources to 199 Million Ounces Contained Silver and 1.7 Million Ounces Contained Gold (350 Moz AgEq) in M&I.](#)

The market liked what it was hearing.



[Discovery Silver Corp](#) (TSX:DSV), which dropped its Q2 results on August 12, is also claiming new high ground.

The company is currently producing gold at its recently acquired [Porcupine Complex](#) in the Timmins camp of Ontario. Its [Cordero Project](#) in Mexico, ranked among the world's largest undeveloped Ag projects based on reserves, is currently being pushed along the permitting curve.

Lithium Stox

Lithium prices and related equities, which appear to have carved out a meaningful bottom in recent weeks, got a boost on Monday after battery metal giant Contemporary Amperex Technology Co (CATL) halted operations at a major mine in China's Yichun lithium hub - Lithium Market Soars as CATL Shuts One of World's Top Mines.

The mine's forced closure follows the company's failure to extend a key mining permit, which expired on August 9. There's now speculation that other mines in China could face similar suspensions as Beijing moves to tackle overcapacity across its economy (CATL's operation accounts for roughly 6% of global lithium output).

Lithium producers around the globe saw sharp price gains on Monday—Albemarle was up 15%+, Piedmont was up 18%, Lithium Americas was up13%—but surrendered a good chunk of those gains during Tuesday's session.

Further down the Li food chain, **Patriot Battery Metals** (TSX:PMET), a junior sector standout a few years back after the company soared from mere pennies to a high of $18 in the wake of its Shaakichiuwaanaan discovery in the Eeyou Istchee James Bay region of Quebec, has firmed up in recent weeks, suggesting a bottom is in for this well endowed profile exploration/ development play.

Patriot, which recently updated Shaakichiuwaanaan's tier-1 status, boasts 108.0 Mt at 1.40% Li_2O, 166 ppm Ta_2O_5, and 66 ppm Ga and is currently ranked THE largest lithium pegmatite Indicated Mineral Resource in the Americas.

More recently, the company declared a maiden MRE for the caesium in its subsurface layers via the following July 20 headline - World's Largest Pollucite-Hosted Caesium Pegmatite Mineral Resource Defined at Shaakichiuwaanaan.

(cesium is a high-value, rare, supply-constrained critical mineral)

General Mining Sector News

Barrick Writes Down Loulo-Gounkoto

Barrick Mining (TSX:ABX) reported a net charge of $1.04 billion due to the dramatic seizure of its Loulo-Gounkoto gold complex by the military junta in the West African nation of Mali - Barrick falls after posting $1 billion charge on Mali mine.

The company stated in its Q2 earnings report earlier this week that the billion-dollar loss was due to "the deconsolidation of Loulo-Gounkoto following the change of control." The impact on its earnings was somewhat offset by the sale of its 50% interest in the Donlin Gold project in Alaska. Donlin netted the miner $745 million.

The escalating tensions between Barrick and the junta, which included the suspension of mining operations, the detention of high-ranking employees, an arrest warrant for Barrick's CEO over allegations of money laundering, the seizure of multiple tonnes of gold from the Loulo-Gounkoto complex, etc, all stem from an alleged outstanding tax bill.

Loulo-Gounkoto was responsible for nearly 700k ozs of the mining giant's precious metal output in 2023 (roughly 14 percent). The company sunk over $10 billion in the project, which contributed up to 10% to the nation's annual GDP and employed 8,000.

The forced writedown of Loulo-Gounkoto "*reinforces the company's challenge in regaining control," Bloomberg Intelligence analysts Grant Sporre and Emmanuel Munjeri wrote in a note. "The writedown threatens to overshadow Barrick's operational improvements at key assets, robust cashflow generation and declaration of a 5-cent performance dividend*," the analysts said.

Despite the billion-dollar hit, Barrick raised its quarterly divi by 50%, to 15 cents per share, up from 10 cents in May - Barrick Mining tops profit estimates, lifts dividend despite Mali mine loss.

Capstone Greenlights Mantoverde Expansion

Capstone Copper (TSX:CS) is moving forward with the expansion of a sulphide concentrator at its Mantoverde Project in the Atacama region of Chile, despite a 20% increase over previous cost estimates - Capstone Copper Announces Sanctioning of Mantoverde Optimized Project.

Total capital expenditures for the project are now expected to run $375 million, up from $315 million.

The expansion is expected to increase the mine's throughput from 32,000 to 45,000 tonnes of ore per day, providing incremental copper and gold production of approximately 20,000 tonnes and 6,000 ounces per annum, respectively, and extending the mine life from 19 to 25 years.

2025 guidance for Mantoverde: between 97,000 and 112,000 tonnes of copper.

The mine produced its first concentrate in June of 2024.

This August 8 press release went on to state: *Capstone estimates that the MV Optimized sulphide concentrator expansion construction will require approximately one year, followed by a ramp-up period in Q4 2026. The expanded sulphide throughput capacity of approximately 45,000 ore tpd is expected to be sustained starting in early 2027. The Company expects the construction and ramp-up of the oxide leach optimization to require an additional quarter, with higher cathode production starting in Q2 2027*.

Capstone owns 70% of Mantoverde—Japan's Mitsubishi Materials owns 30%.

Hits of the Week

The gold mining sector continues to rely on older discoveries for reserve growth despite a sustained gold price rally in recent years, an annual analysis by S&P Global finds. According to the database of gold discoveries tracked by S&P, the gold sector added three new major discoveries in 2024, taking the global inventory (reserves, resources and past production) to nearly 3 billion oz. across 353 deposits. The gold ounces represent an increase of 3% or 82 million oz. over 2023, which had 350 deposits containing a total of 2.9 billion oz. The S&P analysis points out that — consistent with its previous reports — almost all of the new additions to its list were discovered decades ago and have only recently met its 2-million-oz. criteria for a "major gold discovery." Notably, no major discoveries occurred during the 2023–24 period, and since 2020, only six major discoveries have been made, contributing a total of 27 million oz. in reserves and resources, it said - Gold exploration spend trending down despite higher prices – S&P Global

OceanaGold (TSX:OGC) set a new all-time high on Thursday after the company turned in strong quarterly results that were marked by record revenue and profit. During the second quarter of 2025, the Vancouver-headquartered gold miner saw revenue jump to a record $432 million, compared with $359.9 million the previous quarter and $251.2 million the same period last year. Net profit also hit a record $117.6 million, up from $101.2 million in Q1 and just $34 million a year ago, as did adjusted earnings per share ($0.51), which beat analyst estimates. BMO Capital Markets had forecasted an adjusted EPS of $0.41 - OceanaGold hits new high on strong Q2 results

Reaching the site of the biggest undeveloped US copper deposit requires a 15-minute drop by steel cage into the sweltering bowels of the Arizona desert. There, more than a mile beneath the surface, the temperature can reach 175F (79C), so massive cooling units run constantly, churning out mist that condenses and drips from the ceiling, calcifying the pipes lining the tunnel walls. It's called Resolution Copper, and it holds enough of the critical metal to supply a quarter of US demand for years. Yet two decades and over $2 billion later, not a single ounce of copper has been mined. While engineers have thoroughly mapped the ore body and workers have built one of the deepest shafts in the US, the deposit owned by Rio Tinto Group and BHP Group has been stalled by permitting hurdles as well as tribal and environmental opposition
- A mile underground, America's largest untapped copper mine inches toward reality

SAN JUAN, Aug 8 (Reuters) - Argentina holds rich copper deposits in the mountainous north along the Chilean border, but, unlike its mining powerhouse neighbor, has not built power lines and roads needed for new projects backed by miners such as BHP and Rio Tinto.
President Javier Milei's austerity campaign to clamp down on inflation and debt means the South American country is up against bigger challenges than most countries to build the infrastructure needed by mines worldwide. Unconventional ideas, such as sharing infrastructure between miners or paying for it with royalties, will likely be part of the solution. "The government said it won't provide any funding, but that doesn't mean it isn't responsible for getting things done," said Roberto Cacciola, president of Argentina's mining chamber, who is urging authorities to step up efforts to ensure infrastructure gets built - Argentina's copper dreams need infrastructure - but who will build it?

De Beers, the world's largest diamond miner by value, and its joint venture partner in Angola, state-owned Endiama, have discovered a new kimberlite field, its first such discovery in three decades. The diamond giant said it struck kimberlite, the most common source of mined diamonds, in its first drill hole into a high-priority target cluster in July. It plans to conduct more drilling, geophysical surveys and lab analysis over the coming months to determine the kimberlite type and its diamond potential. "Angola is, in our view, one of the best places on the planet to look for diamonds, and this discovery reinforces our confidence," De Beers chief executive Al Cook said in the statement -De Beers strikes first kimberlite field in 30 years

BZ / BNZ

EDITOR'S WATCHLIST

Cracking the Glenburgh Code Unlocking Australia's next Multi-million-ounce gold District.

August 6th Investor Presentation

August 7th Euro Hartleys: BNZ - Is This The Next Tropicana?

Benz Mining Corp. (TSXV: BZ) (ASX: BNZ) is a pure-play gold exploration company dual-listed on the TSX Venture Exchange and Australian Securities Exchange. The Company owns the Eastmain Gold Project in Quebec, and the recently acquired Glenburgh and Mt Egerton Gold Projects in Western Australia.

Benz's key point of difference lies in its team's deep geological expertise and the use of advanced geological techniques, particularly in high-metamorphic terrane exploration. The Company aims to rapidly grow its global resource base and solidify its position as a leading gold explorer across two of the world's most prolific gold regions.

BENZ MINING CORP.

Benz Mining (BZ:TSX Venture / BNZ: ASX) closed at A$1.25 on the Australian Exchange last night. Benz put out more news and the stock responded.

August 19th news:
[Benz Announces New Discovery at Icon Strengthened with Further Broad Gold Intercepts]

Highlights:

- Further step-out holes drilled at Icon targeting a large gap under previous drilling returned broad zones of gold mineralisation, confirming continuity and significant potential for resource growth:
  - 142m at 0.95g/t gold from 227m within a broader 229m at 0.7g/t gold (25GLR_048)
  - 102m at 1.0g/t gold from 96m (25GLR_058), pending assays for remainder of hole
  - All holes ended in mineralisation and will be extended to test the central lens position
- Drilling has also intersected the newly discovered Central Lens, which remains only partially drilled and open, with holes ending in strong mineralisation:
  - 55m at 1.1g/t gold from 447m within 275m at 0.6g/t gold (25GLR_044) ending in mineralisation
  - 43m at 0.9g/t gold from 352m (25GLR_036) ending in mineralisation[1] with further assays pending
  - Holes to be re-entered for extension
- Drilling to continue with four RC drill rigs fully funded by recent A$30m bought deal[2], with two dedicated to the exciting bulk tonnage potential at Icon

I would urge people to read the full news release which contains diagrams, maps and further comments by the CEO. Also go back and read the last couple drill result news releases. I think this project is advancing amazingly well! [**Benz Mining News**]

T. Rowe Price filed as a substantial shareholder, 13,299,921 Australian CDIs and Euroz Hartleys Limited is the lead manager/broker for another 30,406,091 CDIs and wrote a buy recommendation with a target that has already been hit! Institutions and major shareholders are buying into the company to see how big this deposit gets.

They will now have four rigs drilling, about $A40 Million for exploration, and lots more news coming! Stay tuned.

*I own shares in Benz Mining

Tradingview
Tradingview is an excellent online charting platform as well as a social network for traders and investors to exchange ideas.

Glossary

Diamond Hands
Slang term for an investor who is ready to hold a position for the end goal, despite the potential risk, headwinds and losses.

Doji Candle
Doji Candles look like a cross because the financial instrument's open and close for the time period are close to equal.

Fibonacci Retracement (Fib)
These are levels in the chart where support and resistance are likely to occur. The levels are 23.6%, 38.2%, 61.8%, and 78.6%. 50% is often added but is not an official level. The levels are calculated from two points chosen by the user, usually an extreme low and an extreme high.

FLEM & DHEM
Fixed Loop Electromagnetic and Down Hole Electromagnetic Surveys

FOMC
The Federal Open Market Committee consists of 12 members and is the U.S. Fed's monetary policy making body. It is responsible for formulation of a policy designed to promote stable prices and economic growth.

FOMO
Fear Of Missing Out

Naked Shorting
It is the illegal practice of shorting stock that is not borrowed.

Nonfarm Payrolls
Is an official statistic released by the U.S. department of labor, usually on the first Friday of the month. It is a measure of the number of workers in the U.S. excluding farm workers and those employed in private households or non-profit organisations.

Shorting
Borrowing stock, selling it in the market to hopefully buy it back at a lower price, making profit from the difference in price, and then returning the borrowed stock.

Short Squeeze
When a company's stock starts to quickly rise because people shorting the stock are trying to cover their losing positions to prevent further loss.

YOLO
You Only Live Once
