Gold continues to set new all time highs!

Gold is currently at all time highs again, almost at \$3750US/oz.

Last Wednesday the FOMC cut rates by .25% which was widely expected. Some speculated on a .5% cut and others thought the cut was being forced by political pressure. Will there be more cuts this year?

[Reuters: [Fed lowers interest rates, signals more cuts ahead; Miran dissents](#)]

[The Hill: [Fed cuts rates as plunging job gains trigger alarm for economy](#)]

[Reuters: [Fed officials throw doubt on need for further cuts](#)]

Gold and silver prices are climbing as the US dollar is expected to weaken amid market speculation about potential additional rate cuts. The US faces uncertain times, with inflation, employment data, and future rate cuts remaining uncertain.

Have a great rest of the week!

Steel Meets Rising Global Electricity Demand

Justin Tolman

WHY RARE EARTHS ARE CRITICAL TO EV MOTORS

THE RARE EARTHS NEEDED TO

PRODUCE EV MOTORS

Batteries aren't the only EV components that require minerals—
motors also rely on them, with some types more intensive than others.

PERMANENT MAGNET SYNCHRONOUS

Uses permanent magnets for efficiency & power density, making it ideal for low cost compact EV drivetrains.

INDUCTION MOTOR

Generates torque by inducing current without magnets. It doesn't require

ELECTRICALLY EXCITED
SYNCHRONOUS MOTOR

Uses an electromagnet instead of permanent magnets. It doesn't require rare earths.

AXIAL FLUX MOTOR

Uses a flat, disc-like design for higher torque density, allowing tighter packaging in lightweight

THE KEY TO KING GLOBAL'S
POTENTIAL**What is a VMS Deposit?**

Volcanogenic Massive Sulfide (VMS) deposits represent significant mineral systems that typically contain copper, gold, silver, and other metals. King Global's Silver Cord Project is targeting VMS-style mineralization in the historically productive Black Canyon Mining District.

The project shows key VMS potential indicators as highlighted in the company documents:

- Precambrian Geology present in Black Canyon belt
- Iron & Rhyolite Tuffs providing optimal VMS environment
- Magnetic Signatures confirmed by 2023 UAV survey
- Copper Anomalies identified in soil sampling
- Strategic Location on trend with Kay Mine deposit.

King Global's VMS Advantage

The Black Canyon Project shows all the classic hallmarks of a major VMS district:

- **Optimal Geological Setting:** Located in the Black Canyon belt with the right Precambrian geology
- **Proven Production History:** Multiple past-producing mines in the district
- **Technical Indicators:** Presence of iron formations and rhyolite tuffs—textbook VMS indicators
- **Geophysical Signatures:** VTEM and 3D-IP surveys reveal disrupted magnetic signatures typical of VMS systems

This compelling geological setting, combined with King Global's methodical exploration approach, positions the company to potentially unlock a major VMS discovery with district-scale potential.

King Global Ventures Inc. (CSE: KING | OTCQB: KGLDF | FSE: 5LM0) is a growth-oriented exploration company focused on the acquisition, exploration and development of precious and base metal properties. Led by an experienced management team with a strong track record of success, King Global is well-positioned to create value for shareholders through its portfolio of prospective projects, including the flagship Black Canyon VMS project located in the renowned mining jurisdiction of Yavapai County, Arizona.

1) Prime Location**America's Copper Heartland**

King Global's Black Canyon Project lies at the heart of one of North America's most productive copper terrains. Here's why location matters:

- **Strategic Positioning:** Just 100 kilometers north of Phoenix, Arizona—America's #1 copper-producing state
- **Historical Production:** 15 former producing mines within the property package
- **District Potential:** 60 vein-hosted base and precious metal mines within 150 km radius
- **Infrastructure Advantage:** Excellent accessibility via major highways, plus proximity to power, water, and skilled labor
- **Favorable Jurisdiction:** Arizona ranks among the top mining-friendly jurisdictions globally with established permitting processes

The Black Canyon Project encompasses 213 contiguous mining claims covering 3,800 acres of consolidated VMS terrain. The project sits within the same geological trend as successful VMS deposits, including Arizona Metals' Kay Mine, demonstrating the district's potential for significant copper-gold-silver mineralization.

2) Technical Validation**Modern Science Meets Historical Production**

King Global is applying cutting-edge exploration techniques to unlock the full potential of a historically productive district:

- **Comprehensive VTEM Survey:** Completed 660 line KM survey over the entire project area, revealing multiple high-priority targets
- **Advanced 3D-IP Survey:** 2024 survey revealed significant mineralization potential beyond historical workings
- **Geological Confirmation:** Technical work has confirmed key VMS indicators, including:
 - Precambrian Geology present in Black Canyon belt
 - Iron & Rhyolite Tuffs providing optimal VMS environment
 - Magnetic Signatures confirmed by 2023 UAV survey
 - Copper Anomalies identified in soil sampling

The Howard Copper Mine acquisition further strengthens King Global's position, bringing a historically productive asset (100,000 tons at 3-5% copper) into the company's growing portfolio. Recent geophysical surveys indicate extensive exploration potential beyond the historical workings.

3) Clear Path to Development**Methodical Execution**

King Global has outlined a clear, staged approach to value creation:

- **Current Program:** USD \$1.4 million drill program completed Howard Copper Mine
- **Near-Term Catalysts:** Planning 2,500-meter diamond drilling campaign Silver Cord
- **Strategic Expansion:** Option to earn 65% interest through structured investment
- **Disciplined Approach:** Exploration dollars focused directly on advancing the Howard Copper Mine, Silver Cord and Iron Horse Project

This methodical approach ensures efficient capital allocation and a steady stream of news flow as the company progresses through its development milestones.

The Changing Political Landscape for Copper

As copper transitions from merely an industrial metal to a strategic asset, government policy is increasingly supportive of domestic production:

- **Strategic Designation:** Copper is being repositioned as a strategic resource critical to energy security and national defense
- **Permitting Acceleration:** Executive orders have been signed to fast-track the development of critical minerals, with copper featured prominently
- **Financial Incentives:** New policy frameworks providing tax credits and funding support for domestic copper exploration and production
- **Trade Protection:** Potential implementation of tariffs on copper imports to boost domestic production

KING**CORPORATE
SPONSOR****KING GLOBAL
VENTURES****CURRENT ACTIVITIES**

- Recently finished a USD \$1.4 million drilling program at Howard Copper Mine
- Planning a 2,500-meter diamond drilling campaign, Silver Cord Mine
- Completed comprehensive 660 line KM VTEM Survey over entire project
- Conducted 3D-IP survey in 2024 revealing significant mineralization potential
- Finished adding 1000 acres to land package based on VTEM results

STRATEGIC APPROACH

- Option to earn 65% interest through structured investment
- Mapping each of the 15 former mines with precision
- Running advanced geochemical & geophysical surveys across the property
- Securing permits needed for targeted drilling via comprehensive environmental impact assessment
- Preparing for modern drill programs

Q3 12 PAGE PRESENTATION**KING NEWS RELEASES**

This dramatic shift in copper's political importance creates an unprecedented opportunity for companies with U.S.-based copper assets—exactly where King Global is strategically positioned.

**4) Strong Financial Position
Ready to Execute**

King Global combines a strong balance sheet with a shareholder-friendly capital structure:

- **Solid Cash Position:** \$5.3 million capital raise recently completed
- **Near-Term Catalysts:** Market capitalization of \$20 Million
- **Growth Potential:** Currently trading at \$0.50-0.60 per share
- **Insider Alignment:** Management controls over 60% of shares
- **Long-Term Commitment:** No insider sales since company inception

This financial positioning gives King Global the runway to execute its exploration strategy without near-term dilution, allowing shareholders to capture the full upside potential of exploration success.

**5) Experienced Leadership
A Team That Delivers**

King Global is led by a seasoned team with a track record of success across capital markets and resource development:

- Robert Dzisiak - CEO: Extensive capital markets experience with a proven track record of growing organizations and managing IIROC member firms
- Ben Hudye - Chairman: Significant business development success including founding Zenith Bank & Trust
- Technical Advisory Team: Ensures strategic project development with deep geological expertise

- **Legacy of Excellence:** Building on the wisdom of veteran prospectors like Steve Karolyi, whose methodical approach to exploration informs King Global's strategy today

This combination of capital markets expertise and technical knowledge provides King Global with the leadership necessary to advance its projects effectively while creating shareholder value.

The Timing Opportunity

Several near-term catalysts make now the ideal time to consider King Global Ventures:

Exploration Results Pending

Results from the current 2500 metre drilling program at the historic Howard Copper Mine expected late May 2025

Drilling Campaign Launch

Upcoming 2,500-meter diamond drilling program, Silver Cord Project

Magnetic Surveys

Howard Copper Mine and Iron Horse Project

Expanding Asset Base

Ongoing evaluation of additional strategic acquisitions

Market Awareness Growing

Increasing investor focus on U.S.-based copper projects

As King Global advances through each phase of exploration, the company is building something substantial—a thoroughly explored, well-understood Silver-Gold-Copper projects in one of North America's most productive mining regions.

HOW TO POSITION SIZE, MANAGE RISK, AND INCREASE SIZE WHEN STARTING OUT DAY TRADING

BY: CORY MITCHELL
SEPTEMBER 13, 2025

TRADETHATSWING.COM

When starting out day trading, control trade risk, daily risk, and have a schedule and protocols for when these can be scaled up. I recommend a level system. This is what was used at the day trading firm (physical floor) I worked at for many years.

I have adjusted the protocols slightly. The rules do take profitability into account, because there is no point increasing position size or risk if not profitable. But they also look at behaviour—how well a trader follows their strategy and adheres to risk controls. Risk and position sizes are cut, sometimes heavily, if a trader has poor trading behaviours.

The article is broken into three sections, all of which tie together:

- Trade risk protocols – How much can be risked per trade, and how this increases or decreases over time.
- Daily risk protocols – How much can be lost per day, as a multiple of trade risk, and rules that determine when this changes.
- Tips for effective position sizing and managing risk while day trading.

Stick to a “level system” protocol like this until you are regularly adhering to your strategy and have reached the trade risk level you want by progressing through the levels (most traders cap [trade risk between 0.5% and 1% of their account balance](#)). Once you have multiple months of profitable trading under your belt and are following your strategy consistently, then you can stay at your chosen trade risk. At that point, sit down and set up a new reward and punishment structure for when you follow protocol and when you mess up.

Trade Risk Protocol

Position sizes start at 0.1% risk per trade. To be increased over time if adhering to the strategy, and profitable.

Start: 0.1% risk per trade.

For example, if trading a \$10,000 account, this means risk is only \$10 per trade. This goes for pyramiding as well. Any single trade cannot exceed \$10 risk. If the position is added to, the total risk cannot exceed \$10, which means the initial stop loss on the original position must be moved in.

If testing things out, there are NO increases. Increases can only come once the method is defined, so we know how we are trading and can assess whether we are following the system or not.

After 2 weeks, increase to 0.2% risk per trade: IF the strategy has been followed at least roughly 70%+ of the time, and the account is up at least 2R (2x\$risk per trade for the account size; \$20 in the example above). No point increasing position size until the strategy can be followed, and it shows profitability. When testing things out and fine-tuning rules, there is no reason to increase risk.

- The 70%+ figure here refers to a statistic called [Efficiency](#). Efficiency measures how well we follow a strategy. For our purposes here, think in terms of trades. If you took 10 trades in a week, at least 7 of them should have followed the strategy. Don't worry about very tiny deviations; multiple major deviations (more than 3 trades out of 10 where we totally didn't follow the plan at all) indicate we are not ready to increase risk.

After two weeks, Increase to 0.3% risk per trade: IF the strategy has been followed at least roughly 70%+ of the time, and the account is up at least 2R (\$40 in the example above).

After two weeks, Increase to 0.4% risk per trade: IF the strategy has been followed at least roughly 70%+ of the time, and the account is up at least 2R (\$60 in the example above).

Continue to increase risk per trade by 0.1% every two weeks, if adhering to the strategy, and profitable as discussed above.

Risk Increase Cycle (Every 2 Weeks)

Level	Risk/Trade	Conditions to Increase
1	0.1%	Starting point TradeThatSwing.com
2	0.2%	✅ 70%+ strategy adherence ✅ +2R profit
3	0.3%	✅ 70%+ adherence ✅ +2R
4	0.4%	✅ 70%+ adherence ✅ +2R
...	+0.1%/2wks	Repeat if profitable & disciplined

 *Efficiency = % of trades following strategy (≥70% = eligible to scale)*

- If unprofitable for a two-week period, drop back one level. There is no point escalating into losses. Dropping back a level (or more) means following the 2-week cycle again to increase.
- If, on any given day, a [pre-trade routine](#) was not completed, or the strategy was not followed (less than 50% of the time—more than half of the trades didn't follow our prescribed strategy), drop back a level, effective the next day (even if profitable!). If you aren't doing what you are supposed to be doing, "No soup for you!"
- On any given day, if the daily stop loss is blown, even by a minuscule amount, drop down 1 level, effective the next day. For example, the daily limit is \$40, and you lose \$41. Because if this limit is hit, we are done for the day. If near the level, before taking a trade, reduce the risk slightly so as not to be done for the day if you lose. Leave yourself with wiggle room to claw back, because once that level is reached, the day is done.
- On any given day, if there is a large blow-up, of more than 15% of the daily stop loss, drop back 2 levels, effective the next day. For example, the daily limit is \$50, and you lose \$57.5 or more.
- On any given day, if there is a blow up of more than 30%, back to level 1 (0.1%), effective the next day, to go through the whole cycle again.

Risk Reduction Triggers

Trigger	Action
❌ <50% strategy adherence (daily)	Drop 1 level
❌ Daily stop loss exceeded TradeThatSwing.com	Drop 1 level
❌ >15% breach of daily stop	Drop 2 levels
❌ >30% breach of daily stop	Reset to Level 1

 *Once dropped, restart 2-week cycle to climb again*

- If you dropped back a level, there is only ONE shortcut to moving up a level the next day, instead of grinding it out for two weeks for an increase. And that is:
If at any point, you have 10 trades in a row (can cover multiple days) with 100% efficiency, and were profitable over those 10 trades, you can move up a level the next day. This means you followed your strategy on every trade, for 10 trades in a row.

Shortcut to Level-Up

- ✓ 10 trades in a row
- ✓ 100% strategy adherence
- ✓ Profitable overall
- Advance 1 level next day

- Any time there is a blow-up day, you must send an email immediately, explaining how you blew your stop, and actionable things you can do to avoid this happening in the future. Include details of how to avoid it, based on actual thought, not generic BS.

Send this email to yourself, with a subject naming the reason for the mistake. Save them in your inbox in a folder, so you can review them at a later date, see the most common problems, and monitor if your action plans are working.

You could also send this to a trading friend or someone who can keep you accountable.

You could also use the comments section of this page instead of sending an email. If you blow your daily stop loss, leave a comment listing the mistake and the action plan.

Accountability Protocol

- 📧 Email yourself after any blow-up:
 - Subject: Reason for mistake
 - Body: Specific action plan to prevent recurrence
- 📁 Save in folder for review
- 👥 Optional: Share with a trading peer or comment publicly

Interested in day trading stocks? Learn how and when to capitalize on price patterns that occur multiple times per day in stocks. Learn precise patterns to watch for that present a favorable risk/reward opportunity in the [Price Action Stock Day Trading Course](#).

Daily Risk Limits

Daily risk is 3.5x the trade risk limit, or basically 3.5R. So at the 0.1%/trade risk level, daily risk will be 0.35% of the daily starting balance of the account.

This allows for taking 3 full risk trades, losing all of them, and still not blowing the daily stop loss. It also leaves a tiny bit of room to “fight back”. For example, if you do lose 3 trades, you may be down 3.1R. You still have room to take a tiny trade (partial risk), potentially win, and give yourself some breathing room.

The daily SL cannot be blown. As per above, the penalties can be severe (to your account as well!). As they should be. If you can’t control your risk, you simply can’t increase your size.

Tips for Effective Risk Control When Day Trading

Many new traders struggle with getting the ideal position size (or close to it), in the moment, when price is flying around. They end up risking way too much or too little. This can be remedied by writing down position sizes for various stop loss increments, based on your trade risk limit, for each stock you trade, before you begin trading.

Before trading each day:

- Write down what trade risk level you are at, for example, 0.2%. Best to also convert to a dollar amount (0.2% x account starting balance).

- Write down what your max daily loss is: $3.5 \times \text{trade risk level}$. Also convert to a dollar amount.
- Look at the stocks you will be trading that day, and estimate some stop loss sizes. To maintain your trade risk, for example, write down what your SL would be with a \$0.05 stop loss, a \$0.1 SL, a \$0.15 SL, \$0.2 SL, etc. This way, as a setup is forming, you can very closely estimate what your position size will be (err on the low side). For example, as a trade is setting up, it looks like an SL may be about 17 or 18 cents. Use the 0.2 SL position size you have written down already. For [forex day trading](#), calculate position sizes for 2, 3, 4, 5, 6 pip SLs, etc.
- Example: \$10,000 account at the 0.3% level. Trade risk is \$30 per trade (don't lose more than that on a trade) and daily risk is $3.5 \times 0.3\%$ or \$105 (definitely don't lose more than that during the day!).

If trading a stock, you may write down what your position size would be for a 10, 15, 20, 25, and 30 cent SL (or the range of SL values you are likely to have on the stock you are trading; check prior days' action if needed for estimates).

You can risk up to \$30 per trade, so if a trade comes along where the stop loss looks to be about 8 cents (you can calculate it quickly) or you can use your 0.1 SL level you have written down, which would be $\$30 / 0.1 = 300$ shares. If you lose \$0.1 on 300 shares, you lose \$30. That's a good position size. If you find your SL could actually be 0.9 or 0.8, move the SL there. Now you are risking just under \$30. Good. If you find the good SL spot is actually 0.15 away (and your position size is based on a 0.1), either keep the 10 cent SL, or immediately sell 100 shares to align the position size for the risk. Now you have 200 shares at 0.15 risk, which is \$30 (plus the impact of buying and selling those other 100 shares).

If you have software that calculates your risk based on your approx entry and SL, great. Use that, but ideally, you don't want to be calculating position sizes on the fly, especially if day trading multiple stocks, which may have very different prices and potential SL sizes.

Writing this stuff down before trading is NOT a pre-trade routine. This is just stuff we need to do each day, like brushing our teeth, opening our charts, [scaling each stock's/chart's y-axis](#) to ADR, and opening our trading platform.

A pre-trade routine is mental. Calming ourselves, focusing on our goals (following the process), visualizing sticking to the process, clearing any negative or overall positive voices (getting to neutral), etc.

My [EURUSD Day Trading Course](#) teaches you how to day trade the EURUSD in 2 hours or less a day, with the potential to make double-digit percentage returns each month (with practice) with patterns that tend to occur almost every day.

Final Word On Managing Risk and When to Increase It When Starting Out Trading

Following a plan should be a reward, but it does need to be a plan worth following. This is why profitability is included.

There is no point increasing risk or position sizes if a method is not well-defined, isn't profitable, or we can't follow a strategy.

Notice how with all these rules and levels, this becomes its own game? And that is what we want! To be [trading our own game](#), based on doing what we are supposed to be doing, as opposed to getting lured into the market's games/traps.

Stick with a level system like this until you are consistently profitable for many months, and follow your strategy regularly. Then, revamp the reward/punishment protocols to keep you focused on doing the right things from day to day. Put high focus on efficiency, as well as any specific areas you need to work on, but you no longer need to yo-yo your position sizes or risk from day to day. Just risk your standard amount per trade and set your daily limit at a multiple of that.

Need help with figuring everything out and following a strategy? Join me for a coaching session, and let's get you on the right track.

EMINENT GOLD

CELTS – Silicon Analogue
Alteration Cap

High-Conviction Gold Exploration in Nevada's Most Proven & Rapidly Emerging Discovery Corridors

Unlocking what could be Nevada's next district-scale gold system—backed by **Kinross**, a tightly held float, and three high-impact projects with near-term catalysts. *The setup is classic: early-stage, high-conviction, positioned ahead of broader market recognition.*

Flagship Project: Hot Springs Range (HSRP) – Drilling Resumes

Emerging Gold Trend Carlin-Style System

Otis is already demonstrating strong gold potential. Combined with Eden's exploration upside, HSRP is emerging as a rare, multi-zone system with the scale to support a district-defining gold opportunity.

- Every hole hits gold in maiden drill program—grades up to **8 g/t Au** confirm strong mineralization potential
- Untested parallel corridor located beside Nevada's **50Moz Getchell Trend**¹
- Otis target shows analogues to Turquoise Ridge (~7Moz Au produced²)
- Follow-up drilling underway to test the main structure
- Kinross acquired 9.9% stake after first drill hole

Celts Project – Drilling Q4 2025

Silicon-Style Open Pit in Nevada's prolific Walker Lane Trend

Celts carries the same geological DNA as Silicon—and will be drilled using the proven modelling that delivered AngloGold Ashanti's first intercepts at Silicon, which led to their major discovery.

- Identified as a direct analogue by the same technical team behind Silicon and Merlin—Nevada's largest recent gold discovery
- Peripheral surface samples up to **33 g/t Au** support steam cap model
- IP survey reveals a faulted boiling zone beneath a rhyolite dome—a structural hallmark of Silicon
- Barrick staked ground next door, underscoring the district's strategic importance

Gilbert South – Drilling 2026

High-Grade Vein System Bonanza Surface Gold Untested Feeder Zones

Gilbert South offers rare exploration upside—bonanza-grade surface gold with shallow feeder structures likely exposed by erosion. Shallow historic mining confirms the gold potential, but the source structure remains untouched, presenting a high-impact opportunity for a major discovery.

- Historic dumps show visible gold up to 30.7 g/t
- Vein network spans 2.5 km
- First targeted drill program on interpreted feeder zone
- Located in Walker Lane, near major epithermal districts

LOOK AT PRECIOUS METALS AFTER THE FED CUT
Although today's reaction in precious metals was muted, the outlook for additional rate cuts through year-end and beyond provides a supportive backdrop for continued strength.

BY: JESSE COLOMBO
SEPTEMBER 17, 2025

THEBUBBLEBUBBLE.SUBSTACK.COM

I wanted to share a precious metals update following today's much-anticipated Fed meeting. As expected, the Fed cut rates by a quarter percentage point and projected two more cuts by year-end. Fed Chair Jerome Powell pointed to a weakening labor market, stating, "I can no longer say" that the labor market is "very solid"—marking the first rate cut since December 2024. Because the move was so widely expected, markets didn't react much, including precious metals. Still, gold and silver remain in strong positions and should benefit from the tailwind of additional cuts ahead.

COMEX gold futures fell just 0.2% today but the breakout from the summer triangle remains intact and still points to a potential move as high as [\\$4,400](#) based on the measured move principle.

Gold priced in euros, which I closely monitor because it removes the effects of U.S. dollar fluctuations, moved very little after the Fed meeting. Its breakout from the summer trading range remains intact and it is still in a strong position to rise further into the end of the year.

COMEX silver futures fell 1.78%, with most of the decline occurring before the Fed meeting, but that's no cause for concern. Silver is naturally volatile and choppy on a day-to-day basis, yet it remains in a strong position after breaking above its former \$32 to \$35 resistance zone, which now serves as support. Silver continues to look well-positioned to reach \$50 and much higher in the near future, as I explained [in this report](#).

I also monitor silver priced in euros because it strips out the effects of U.S. dollar fluctuations, and it has remained in a confirmed bull market since breaking above the €29 to €32 resistance zone, which now acts as support. At this point, there's nothing to do but wait for silver's bull market to continue unfolding.

The Synthetic Silver Price Index (SSPI), a proprietary indicator [I developed](#) to help determine whether silver's moves are genuine or merely noise or manipulation, broke out of its ascending triangle pattern earlier this month. This breakout signals that both the SSPI and silver are now entering powerful new phases of their bull markets.

Gold mining stocks have been on a tear, just as [I anticipated](#), and they remain in a very strong bullish position. While I'm extremely bullish on them over the intermediate and long term, I don't believe now is the best time to jump in, as they've already run well beyond their breakout levels and could be due for a short-term pullback. That's why it's so important to enter positions as they're breaking out, not after the move is well underway. Still, a consolidation phase will likely come at some point, offering another attractive reward-to-risk entry opportunity.

The large-cap gold miner ETF GDX is in a strong technical position and continues to hold above the \$42 to \$46 support zone I've highlighted for many months, including in the report linked above. That's a bullish sign, and I believe this is a time to hold and let the bull market unfold. However, since GDX is now well extended above that breakout level, I don't view this as an ideal time for a first-time entry.

The GDXJ junior gold mining ETF is in a nearly identical position to its larger sibling, GDX, and remains well extended above its \$50 to \$60 support zone. That's not a concern for those already in from lower levels, but I don't believe it's wise to chase it here. A better entry point may come after a period of consolidation.

The SIL silver miners ETF is also in a strong position, holding well above its \$48 to \$52 support zone that I've frequently shown over the past six months.

I closely monitor the U.S. Dollar Index because of its strong influence on precious metals, given their inverse relationship. As [I showed](#) last night, the dollar is in the process of breaking down, but that move still needs to be confirmed by a decisive close below the 96 support level. It bounced off that level today, which I suspected might happen, but that doesn't change my outlook—there's typically a lot of noise around Fed meeting days. A breakdown below 96 could still occur in the coming days, and if it does, it would provide another strong tailwind for gold and silver.

Anyway, to summarize, today's 25 basis point Fed rate cut was widely expected, which is why the market reaction, including in gold and silver, was relatively muted. Still, the path of additional rate cuts through the end of the year and beyond creates a supportive backdrop for precious metals, which remain in strong confirmed bull markets. At this point, we simply need to let those trends play out. As always, I'll keep you updated on what I'm seeing.

In Today's Briefing

Gold

It appears that recent labor-market softness is outweighing inflationary price pressures, as [the FOMC has just cut rates by 25 bps](#) and signaled more easing to come. No big surprise there.

A narrow majority of officials penciled in at least two additional cuts this year, implying consecutive moves at the Fed's two remaining meetings in October and December. The projections hint at a broader shift toward concern about cracks forming in the job market in an environment complicated by major policy shifts that have made the economy harder to read.

The metal is trading on both sides of unch'd, but still clinging to its all-time high in the wake of this quarter point cut...

[Economists over at Commerzbank](#) anticipate an aggressive easing cycle, one that will extend into 2026. Commerzbank's Commodity Analyst, Carsten Fritsch:

"We expect the Fed to cut interest rates by 75 basis points by the end of the year and by a further 125 basis points next year to 2.5%. This is slightly more than the Fed Funds Futures are currently pricing in. We therefore revised our gold price forecast upward to \$3,600 per troy ounce for the end of the year and to \$3,800 for the end of 2026. This is \$200 more than in our previous forecast respectively."

Not everyone's on board with the Fed's dovish pivot. There are a few vocal analysts who think [the Fed should be doing the exact opposite](#) and teeing up rate increases to counter the current economic and political uncertainty.

Darin Newsom, senior market analyst at Barchart.com, voiced the following concern:

"What tends to happen when interest rates are lowered is that the country's currency tends to weaken. And when a currency weakens, the price of goods and services tends to go up. This after the US continues to deal with the self-imposed consumer tax also known as 'tariffs.'"

Price Targets Trend North

Bullish sentiment surrounding the precious metal continues to ratchet higher.

Citing strong central bank demand (China's PBOC extended its buying spree for a 10th month in August), a potentially weaker greenback, and a new Fed easing cycle, Deutsche Bank recently raised its 2026 target to \$4,000 per oz - [Deutsche Bank raises 2026 gold forecast to \\$4,000 as bullion hits record highs](#).

Fed independence has been cited as a growing concern in recent weeks. Against that backdrop, an update concerning the recent drama surrounding Trump's attempt to sack Fed Governor Lisa Cook... [Appeals court rejects Trump's bid to unseat Federal Reserve governor Lisa Cook ahead of rate vote](#).

General Mining Sector News

Money continues to flow into the junior exploration arena. Financings aren't always popular, but they're a necessary unpleasantness in the (capital-intensive) life cycle of a junior entity. These financings are often dilutive, particularly when structured with full warrants at a discount to current trading levels. But when the raise includes a "strategic"—a well-heeled mining savvy investor—they can trigger additional retail buying as the move is often interpreted as "smart money" validation.

Given the suddenness of these raises, a well-regarded junior market observer on Twitter recently underscored the importance—and discipline—of thoroughly reviewing a company's financials. More often than not, the signs of an impending financing are right there in black and white—clear as day. You just need to dig.

JuniorLand Percolates

We're entering a stage in the junior bull cycle where the number of companies registering 30%-plus gains daily, on heavy volume, is becoming increasingly difficult to track. The tool I use to get a feel for what's drawing speculative attention is the [Metals and Mining Gainers](#) channel over at CEO.CA. I like to check it at least once a day. If there's a headline tethered to the gravitational pull, it'll tell you.

A Few (Recent) Fat Hits Via The Biz End Of The Drill Bit

Benz Gold

A company that frequently lights up the aforementioned gainers list is [Benz Gold](#) (TSXV:BZ) which is exploring its multiple target [Glenburgh Gold Project](#) in Western Australia.

After the market closed on Tuesday, September 16, the company reported an additional discovery—a new lens—from ongoing drilling at its Zone 126 prospect - [Benz Discovers 4th High Grade Gold Lens at Zone 126](#).

Zone 126 is no longer a single high-grade shoot, but a multi-lens system extending more than one kilometre in strike. Each lens is open at depth—there's room for expansion. There's also discovery potential on a regional scale.

A map showing the lenses discovered to date at Zone 126 (note the scale on the map—bottom right).

Highlights from this round:

- Maiden drill hole into recently interpreted structural model successfully intercepts the 4th lens:
 - 17 meters at 6.0g/t gold from 662 meters 25GLR082
- New discovery follows recent intercepts into recently discovered the 3rd lens
 - 44 meters at 4.6g/t gold from 475 meters 25GLR070
 - 47 meters at 1.9g/t gold from 451 meters 25GLR057
- Structural model validated: This high grade +100 gram metre hit validates Benz's exploration strategy, which has successfully predicted 3 new lenses along the Zone 126 trend, where previous exploration efforts were unsuccessful.
- New lenses emerging: Drilling currently testing the interpreted 5th lens.
- Depth extension untested: Lenses 1-4 all remain open at depth, highlighting significant opportunity to add further high grade ounces.
- System-scale potential: The Zone 126 trend represents less than one third of the total mineralised corridor at Glenburgh, with strong potential for additional parallel "blind discoveries" to be made.

Assay-related newsflow has been steady over the past few months ([last week the company tagged 44 meters of 4.6g/t Au at Zone 126](#)). The company currently has one RC drill rig turning at Zone 126, two drill rigs probing the bulk tonnage potential along the Apollo Icon trend, and a fourth rig en route to test the project's regional upside.

Benz CEO, Mark Lynch-Staunton:

"The discovery of a fourth high-grade lens at Zone 126 is a breakthrough moment for Glenburgh. Our structural model has once again delivered as predicted - generating thick, high-grade intercepts at over 500m vertical depth, demonstrating just how deep and extensive this system is becoming. With four lenses now confirmed and a fifth already being tested, Zone 126 is rapidly evolving into a multi-lens, kilometre-scale system with exceptional ounce-growth potential."

Assays flowing out of the company's Oz camp is striking a chord with investors...

New Break Resources

[New Break Resources](#) (CSE:NBRK) reported assays from maiden drilling at its wholly-owned [Moray gold Project](#) in the Timmins camp of Ontario (32 kilometers northwest of the Young-Davidson gold mine operated by Alamos Gold Inc) - [New Break Maiden Drilling Returns 4.11 g/t Au over 31.3 Metres in Drillhole #5 and 3.35 g/t Au over 14.8 Metres in Drillhole #4 at Moray Gold Project](#)

The six hole, 1,502 metre diamond drilling program, yielded the following results:

- Hole NBR-25-05 returned 4.11 grams per tonne gold ("g/t Au") over 31.3 metres from 83.0 to 114.3 metres, including 6.75 g/t Au over 7.1 metres.
- Hole NBR-25-04 returned the following intercepts from 100.3 to 187.0 metres:
 - 3.35 g/t Au over 14.8 metres;
 - Including 7.25 g/t Au over 4.0 metres;
 - Also including 2.81 g/t Au over 2.3 metres;
 - Also including 5.07 g/t Au over 2.6 metres;
 - 6.70 g/t Au over 0.8 metres;
 - 1.15 g/t Au over 2.0 metres;
 - 3.44 g/t Au over 5.7 metres; and
 - 1.34 g/t Au over 4.0 metres.

William Love, New Break's CEO: "The results from drillholes four and five represent the discovery of a new gold system and the best gold intersections ever returned at the Moray gold project. While historical drilling indicates that gold mineralization within the Fiset syenite intrusion at Moray may share similar characteristics to the syenite hosted Young-Davidson gold deposit, New Break now believes that sulfide mineralization within the Zavitz zone and below Trench 12, appears to have been remobilized and partitioned into the hematized mafic volcanics bounding the west flank of the Fiset intrusion.

The recrystallized pyrite that carries gold is hosted in parallel westerly dipping breccia veins related to a contact metamorphic effect coincident with dilatant structural deformation flanking the west contact of the syenite intrusive. The syenite intrusive at Moray is interpreted to be three times the size of the intrusive at Young-Davidson by area, where little to no drilling has been carried out along the 3.7 km strike length of the western contact. Further drilling is planned to expand the Zavitz discovery zone.”

A one-year NBRK...

Arizona Gold & Silver

[Arizona Gold & Silver](#) (TSXV:AZS) tabled a round of drill hole assays from its [Philadelphia Project](#) in Arizona - [Arizona Gold & Silver Intersects Deep, High-Grade Mineralization at Philadelphia Project: 9.04 gpt Gold & 34 gpt Silver over 20.43 Metres from 320.73 Metres.](#)

The company reports that recent drilling tagged the highest-grade and thickest Au-Ag to date. The deets:

- High-grade depth extension success: PC25-156 results confirm that the Perry Vein system, a large and thick Au-Ag vein-style deposit, increases in thickness and grade with depth

- 9.04 gpt Au and 34.0 gpt Ag over 20.43 m from 320.73 m depth hosted within
 - 5.61 gpt Au and 29.2 gpt Ag over 38.72 m from 312.50 m depth;
 - including 45.60 gpt Au and 54.9 gpt Ag over 1.19 m from 325.64 m depth.

- Metallic screen analyses underway: PC25-154, -155, and -156 are being evaluated for potential impact of particle gold, as fine grained visible gold is seen in the core;
- Continued exploration drilling planned: drilling will continue with three additional holes planned to test further expansion of the vein along strike;

- Deposit is open in all directions; and

- Expanded exploration program for 2026: Amendment submitted to the U.S. Bureau of Land Management to expand exploration area by 200 acres and prepare 16 new drill pads for 2026.

Mike Stark, President and CEO: “These outstanding results validate our belief in the untapped potential at depth within the Perry Vein system. With consistent high-grade intercepts and visible gold in core, we are seeing increasing scale and grade as we drill deeper. Our 2026 exploration expansion reflects our confidence in this project’s ability to evolve into a significant gold-silver deposit in Arizona.”

A one-year AZS snapshot...

Hercules Metals

Widely followed [Hercules Metals](#) released Leviathan assays from its flagship [Hercules Property](#) in western Idaho - [Hercules Metals Intersects 81 m of 1.5% Copper Within 346 m of 0.66% Copper in First 2025 Drill Hole Completed at the Leviathan Porphyry System in Idaho.](#)

The highlight interval, featured in the text of the above headline, represents a 220-meter step-out from prior drilling.

Highlights:

- HER-25-02 - a 220 meters step-out northeast of 2024 drill hole HER-24-12 - intersected high-grade hypogene enrichment grading:
 - 1.5% Cu and 8.9 g/t Ag over 81 meters,
 - Within a larger interval of 127 meters of 1.1% Cu and 7.0 g/t Ag,
 - All within a broad 346 meters intercept of 0.66% Cu, 3.2 g/t Ag and 78 ppm Mo.

The company states that the upper high-grade subintervals are associated with strong bornite-chalcocite hypogene enrichment mineralization at the centre of the system. The highlight hole extends the strike length of the system to 1.3 kilometers. A series of northwest-oriented fences are now targeting extensions of this high-grade centre along strike to the south, at 200-meter spacings.

Chris Paul, CEO: “The results from the first hole of Hercules’ 2025 drill program show not only strong grades unique to the Leviathan porphyry, but also provide evidence that the secondary hypogene enrichment thickens at the centre of the system. These results are a credit in large part to our team’s development of the robust 3D geological model this winter, which allowed us to systematically home in on this high-grade centre. Thus far, the model has resulted in a significantly greater understanding of the controls on mineralization, which we expect will translate into further exploration success moving forward.

I look forward to providing additional updates over the next several months as results will now continue to come in.”

Hits of the Week

The Fourmile project in Nevada is cementing its position as one of the century's greatest gold discoveries, updated studies by 100%-owner Barrick show. Backed by ongoing 2025 evaluation results¹ and the 2024 mineral resource, the new preliminary economic assessment (PEA) underscores Fourmile's rare combination of grade, scale and exploration upside, confirming its potential to become one of the world's leading gold producers. "Fourmile is emerging as a multi-generational project," says Barrick President and Chief Executive Mark Bristow. "With the ongoing exploration drilling results, we expect to double the resource by the end of this year² and, even more excitingly, we are continuing to define significant high-grade orebody extensions underpinning the current exploration upside estimate of 32-34Mt @ 15 – 16g/t2 outside of our current 2024 mineral resource. As a result, Fourmile is rapidly competing to be the largest and highest-grade gold discovery this century - [Updated Studies Confirm Barrick's Fourmile as One of This Century's Most Significant Gold Finds](#)

Fuerte Metals Corporation (TSXV:FMT) is pleased to announce that it has entered into a definitive agreement to acquire the Coffee Gold Project in Canada's Yukon Territory from Newmont Corporation for upfront consideration of US\$10 million in cash and US\$40 million in common and preferred shares (22,729,126 common shares and 10,842,989 preferred shares of Fuerte). In addition, Fuerte will grant Newmont a 3% NSR on Coffee, which can be repurchased for US\$100 million at anytime up to one year after announcing commercial production. The total consideration for the acquisition is up to US\$150 million - [Fuerte Announces Transformational Acquisition of the Coffee Project from Newmont Corporation](#)

Equinox Gold Corp. (TSX:EQX) is pleased to announce the first gold pour at its Valentine Gold Mine ("Valentine") located in Newfoundland and Labrador, Canada. Darren Hall, Chief Executive Officer of Equinox Gold, commented: "Commissioning of the Valentine process plant is progressing extremely well, with mill throughput averaging 47% of nameplate for the first 15 days of operation, resulting in first gold being poured earlier than expected, on September 14, 2025.

I am very pleased with commissioning progress, which positions Valentine to ramp-up to its nameplate capacity of 2.5 million tonnes per year in Q2 2026 - [Equinox Gold Delivers First Gold at its Valentine Gold Mine in Newfoundland and Labrador, Canada](#)

Barrick Mining (TSX:ABX) has agreed to sell its last operating gold mine in Canada, marking a significant milestone as the company shifts its focus toward copper. The Hemlo Gold Mine in Ontario will be sold to Carcetti Capital Corp. for \$875 million in cash and \$50 million worth of Carcetti shares. An additional \$165 million in contingent payments could be triggered depending on future gold prices. The sale is expected to close in the fourth quarter of 2025. The \$1.1 billion transaction comes at a time when bullion prices are at all-time highs, allowing Barrick to realize substantial value from one of its legacy assets - [Barrick sells Hemlo Gold mine for \\$1.1 billion](#)

Artemis Gold Inc. (TSXV:ARTG) announces plans to upgrade the current Blackwater Mine processing plant ("Phase 1"), increasing nameplate capacity by 33% from 6 million tonnes per year to 8 Mtpa by Q4 2026 ("Phase 1A"). The Company estimates that Phase 1A will be completed at a capital cost of \$100-\$110 million; an industry-low capital intensity of \$50-\$55 per additional annual tonne of processing capacity. Phase 1A was identified as an attractive step change opportunity through the ongoing work to review and progress an accelerated Phase 2 expansion. Phase 1A is capital efficient and will provide a business de-risking mechanism by generating additional production and operating cash flow for investment in Phase 2 while it is being executed - [Artemis Gold Announces 33% Increase to Phase 1 Processing Plant Capacity at Blackwater Mine and Places Order for Long-Lead Equipment for Phase 2 Expansion](#)

Benz Mining (BZ:TSX Venture / BNZ: ASX) closed at A\$1.715 on the Australian Exchange Sunday night. Up A.465 since our last newsletter. The TSX Venture listing is trading at \$1.52 which is lower than it should be with the AUS/CAD exchange rate being factored in. It should be trading 4 or 5 cents higher but as more drill results come out, I get the feeling we could see much higher levels. I own shares and can't wait for more news to come out. From a 52 week low of .13CA, Benz has come a long way!

September 11th news:

[[Benz Strengthens New High Grade Gold Lens at Zone 126](#)]

Highlights:

- New Third Lens discovery extended: Step out drilling returned further thick, high-grade mineralisation from the Third Lens:
 - 44m at 4.6g/t gold from 475m (25GLR070)
 - Within a broader zone of 103m at 2.3g/t gold
 - One of the thickest bulk-style underground results to date
- 47m at 1.9g/t gold from 451m (25GLR057)

September 17th news:

[[Benz Discovers 4th High Grade Gold Lens at Zone 126](#)]

Highlights:

- Maiden drill hole into recently interpreted structural model successfully intercepts the 4th lens:
 - 17m at 6.0g/t gold from 662m 25GLR082
- New discovery follows recent intercepts into recently discovered the 3rd lens
 - 44m at 4.6g/t gold from 475m 25GLR070
 - 47m at 1.9g/t gold from 451m 25GLR057

*I own shares in Benz Mining

Fury Gold Mines (FURY TSX) closed at .88 yesterday. The company's shares have risen from their 52 week low in May (.49) to hitting a new 52 week high in September (\$1.00). The company has announced some drill results recently and yesterday announced that their \$12 million financing has been upsized to \$18 million!

August 12th: [[Fury Intercepts 41.5 Metres of 1.23 g/t Gold at Sakami Gold Project in Quebec](#)]

"Drill hole 25SK-001 is the first of six holes drilled to date, and was designed to test the down plunge extension of gold mineralization intercepted in historical drilling and has intercepted five distinct zones of gold mineralization across a 140-metre (m) drilled length; 4.7 m of 2.72 g/t gold; 0.5 m of 10.2 g/t gold; 1.5 m of 5.17 g/t gold and; 11.8 m of 1.28 g/t gold and; 41.5 m of 1.23 g/t gold (Table 1). Notably, within the two broader intercepts of 11.8 m and 41.5 m, hosted within intense pervasive silicification, there is a high-grade core that includes intercepts of up to 7 m of 3.15 g/t gold (Table 1). "

September 4th: [[Fury Intercepts 59 Metres of 1.59 g/t Gold and 1.5 Metres of 546 g/t Silver at the Sakami Gold Project in Quebec](#)]

"Drill hole 25SK-002 was drilled 140 m below drill hole 25SK-001, where drill hole 25SK-003 was drilled 200 m below previous shallow drilling and 100 m to the west of drill hole 25SK-001, which intercepted five distinct zones of gold mineralization across a 140 m drilled length, including 41.5 m of 1.23 g/t gold (see news release dated August 12, 2025). Highlights from the additional drilling include 49.5 m of 0.6 g/t gold and 22.7 m at 1.47 g/t gold from drill hole 25SK-002, as well as 59 m of 1.59 g/t gold and 9.1 m of 0.92 g/t gold from drill hole 25SK-003 (Table 1). "

With gold at all time highs, both Benz and Fury are well financed and will be doing lots of drilling in the upcoming months.

The Editor: Editor@MarketTrendNews.com

Market Trend News has been featuring small cap companies for 32 years. The newsletter started out as a print publication and is now distributed over the web.

We feature micro cap and small cap companies that want to spread the word about their company and potential.

Our featured companies come from a wide variety of sectors such as mining, oil and gas, technology, biotech and cannabis.

The Corporate Sponsors pages (featured companies) are companies who have paid for a social media advertising package with Market Trend News Inc. Market Trend News Inc may have a stock position in the company being featured.

The Editor's Watchlist section contains featured companies that the Editor has positions in or is thinking of buying positions in. Consider it a swing trader's blog and in no way a recommendation to buy or sell securities. He is not an advisor. Please do your own research and consult a licensed advisor before taking action. Always check all information in the newsletter as internet sources may not always be correct. We do our best to be accurate. If you find an error please feel free to contact us about it.

You are responsible for your trades.

Subscribe

Market Trend News Subscription

Thanks to our corporate sponsors, we are able to cover our costs and offer our newsletter as a free subscription to the reader.

Platinum Subscription

There are two levels of subscriptions. If you are seeing the Platinum logo in the top left hand corner of the first page, then you are Platinum Subscribed. The benefits are that you get the newsletter first. We are also working on other supplementary content that will be offered to Platinum Subscribers first and maybe exclusively.

If you are NOT Platinum subscribed, you can upgrade by clicking on the Subscribe link above or you can remain on the regular list.

Unsubscribing

We do not want to send to people who are not interested. Please use the single click removal link at the bottom of the email that was sent to you. You will be instantly removed.

Links

Tradingview

Tradingview is an excellent online charting platform as well as a social network for traders and investors to exchange ideas.

Glossary

Diamond Hands

Slang term for an investor who is ready to hold a position for the end goal, despite the potential risk, headwinds and losses.

Doji Candle

Doji Candles look like a cross because the financial instrument's open and close for the time period are close to equal.

Fibonacci Retracement (Fib)

These are levels in the chart where support and resistance are likely to occur. The levels are 23.6%, 38.2%, 61.8%, and 78.6%. 50% is often added but is not an official level. The levels are calculated from two points chosen by the user, usually an extreme low and an extreme high.

FLEM & DHEM

Fixed Loop Electromagnetic and Down Hole Electromagnetic Surveys

FOMC

The Federal Open Market Committee consists of 12 members and is the U.S. Fed's monetary policy making body. It is responsible for formulation of a policy designed to promote stable prices and economic growth.

FOMO

Fear Of Missing Out

Naked Shorting

It is the illegal practice of shorting stock that is not borrowed.

Nonfarm Payrolls

Is an official statistic released by the U.S. department of labor, usually on the first Friday of the month. It is a measure of the number of workers in the U.S. excluding farm workers and those employed in private households or non-profit organisations.

Shorting

Borrowing stock, selling it in the market to hopefully buy it back at a lower price, making profit from the difference in price, and then returning the borrowed stock.

Short Squeeze

When a company's stock starts to quickly rise because people shorting the stock are trying to cover their losing positions to prevent further loss.
